

INFINITY FITNESS STUDIOS

Business Requirements Document

Member Retention, Utilization & Operational Analytics
December 2025 - February 2026

Document Control	Details
Document ID	IFS-BRD-001
Version	1.0
Document Type	Business Requirements Document (BRD)
Role	Data Analyst
Primary Stakeholder	Gym Manager
Engagement	Direct client engagement
Purpose	Define the business needs and analytical requirements for improving visibility into member retention, attrition, utilization, renewals, plan performance and operational patterns.
Confidentiality	Client-level data, member information, commercially sensitive values and restricted operational details are excluded.

1. Business Context

Infinity Fitness Studios had approximately one year of operational and membership data available in Excel, including member, membership-plan, payment, attendance/check-in, joining-date, renewal-date, trainer, class-booking, revenue and expense information. The data was not clean or consolidated into a decision-oriented analytical view.

2. Business Problem

Management lacked consolidated analytical visibility into retention, member disengagement, membership usage, renewals, facility utilization, plan performance and trainer activity. This made it difficult to identify behavioral patterns early and use the available data consistently when considering pricing and operational actions.

3. Business Objectives

- Create a consolidated view of member retention and attrition behavior.
- Understand attendance and membership-usage patterns over time.
- Identify renewal behavior and differences across membership plans.
- Identify peak and underutilized periods using attendance data.
- Provide visibility into trainer utilization using available sessions, bookings, workload, assignments and attendance information.
- Use cohort analysis and segmentation to identify changes in member engagement.
- Translate analytical findings into actionable pricing and operational recommendations.
- Provide management with a Power BI dashboard that improves access to recurring analytical insights.

4. Scope

In Scope	Out of Scope / Not Established
Cleaning and preparation of supplied analytical data	Replacement of the studio's operational/member-management systems
Retention and attrition analysis	Real-time production data integration
Attendance and membership-usage analysis	Automated member communication/campaign execution
Membership renewal and plan-performance analysis	Prediction/ML model unless separately evidenced
Peak-hour / utilization analysis	Exact post-implementation financial attribution
Trainer-utilization analysis	Disclosure of confidential member-level records
Revenue/expense analysis where supported by supplied data	Unsupported revenue, churn, retention or ROI claims
Power BI dashboard and analytical deliverables	Production security, refresh architecture or access model not evidenced

5. Business Requirements

ID	Business Requirement	Priority*
BR-01	The solution shall provide management with a consolidated view of membership and operational performance using the available historical data.	High
BR-02	The solution shall measure member retention over the relevant analysis period.	High
BR-03	The solution shall identify member attrition/churn using available evidence of stopped attendance and/or membership cancellation.	High
BR-04	The solution shall support cohort analysis by grouping members by joining period and tracking subsequent attendance/retention behavior.	High
BR-05	The solution shall provide membership-usage and attendance analysis across time to identify utilization patterns.	High
BR-06	The solution shall identify peak and underutilized periods using attendance/check-in information.	High
BR-07	The solution shall provide visibility into membership renewal behavior.	High
BR-08	The solution shall support comparison of membership-plan performance, including monthly, 3-month, 6-month, annual and personal-training offerings where data is available.	Medium-High
BR-09	The solution shall provide trainer-utilization visibility using sessions, class bookings, workload, member assignments and attendance where available.	Medium-High
BR-10	The solution shall provide revenue and expense analysis where supported by the supplied data.	Medium
BR-11	The solution shall allow management to investigate changes in member engagement over time and across relevant member/plan segments.	High
BR-12	The analytical output shall support pricing and operational recommendations, including renewal incentives, longer-duration plan incentives and inactive-member re-engagement where supported by findings.	High
BR-13	The solution shall present key analytical findings through a Power BI dashboard built from the prepared dataset.	High
BR-14	The analytical process shall address data-quality issues sufficiently to avoid presenting unreliable source records as valid business insight.	High
BR-15	Portfolio/public documentation shall protect confidential client/member data and shall not disclose unsupported commercially sensitive values.	High

*Priority is a portfolio BA prioritization based on the confirmed engagement objectives; it is not represented as a formally approved client priority ranking.

6. Business Rules / Definitions

Rule / Definition	Project Interpretation
Retention	Percentage of members who continue their membership over the relevant analysis period.
Attrition / Churn	Member disengagement reflected through stopped attendance and/or membership cancellation.

Cohort	Members grouped by joining month and tracked through subsequent attendance/retention periods.
Utilization	Attendance by hour/day and membership usage; trainer utilization is analyzed separately using available trainer/session data.
Membership Plans	Monthly, 3-month, 6-month, annual and personal-training offerings were within the analysis context.
Confidentiality	Exact client/member values are not to be exposed in public portfolio documentation where restricted.

7. Confirmed Analytical Data Domains

Domain	Available Information	Business Use
Member	Member-level information	Retention, attrition, segmentation
Membership	Plan, joining and renewal information	Plan performance, tenure, renewals
Payments	Payment information	Commercial / membership analysis
Attendance	Check-ins / attendance	Engagement, churn evidence, peak-hour utilization
Trainer	Trainer information and member assignments	Trainer utilization
Classes / Sessions	Bookings and sessions	Workload and utilization
Financial	Revenue and expenses	Business-performance analysis
Time	Approximately one year of history	Cohorts, trends and period comparisons

8. Reporting / Decision Requirements

- Management should be able to see retention and attrition patterns without reviewing raw Excel records manually.
- The analysis should make changes in member engagement visible across cohorts and membership duration.
- Attendance analysis should distinguish high-use from underutilized periods.
- Membership renewal and plan-performance information should support pricing/promotion discussions.
- Trainer activity should be understandable through available workload, session, booking, assignment and attendance data.
- Dashboard insights should remain explainable back to the prepared analytical data.

9. Known Finding Driving the Requirements

Cohort and attendance analysis identified a decline in member engagement following the New Year period, with the decline becoming visible approximately one month later. This finding supports the need for cohort, retention, attendance, renewal and re-engagement analysis. No confidential member counts or unsupported churn percentages are included in this BRD.

10. Recommendation Areas

Area	Supported Recommendation Direction
Renewal	Consider targeted discounts around renewal.
Plan Mix	Encourage longer-duration plans through appropriate incentives.
Inactive Members	Use re-engagement offers for inactive members.
Promotions	Consider quarterly promotional offers.
Operations	Use peak/underutilized-period analysis to support operational decisions.
Trainer Allocation	Use workload, booking and attendance visibility to support staffing/trainer-allocation discussions.

11. Stakeholder & Requirements-Gathering Context

Area	Confirmed Approach
Primary Stakeholder	Gym Manager
Requirements Channels	Calls, WhatsApp, meetings, discussion of existing reports and review of Excel sheets
Analytical Delivery	Power BI dashboard, Excel analysis, presentation, written recommendations, Python notebook, report and live walkthrough
Dashboard Build	Built from scratch
Feedback	Gym manager provided positive feedback; exact wording is not reproduced.

12. Business Acceptance Criteria

- Retention and attrition views are calculated from the prepared member/membership/attendance data using the agreed project definitions.
- Cohort analysis allows joining-period groups to be compared across subsequent attendance/retention periods.
- Attendance views expose peak and underutilized periods.
- Renewal and plan views allow management to inspect membership behavior by relevant plan/period.
- Trainer analysis reflects the available sessions, bookings, workload, assignments and attendance data.
- Power BI outputs reconcile to the prepared analytical data used for the project.
- Confidential client/member data is excluded from public portfolio outputs.

13. Assumptions, Constraints & Open Details

Type	Item
Assumption	Available Excel data is sufficient to support the documented high-level analyses after cleaning.
Constraint	Exact row/member counts are not retained for this portfolio reconstruction.
Constraint	Confidential client data and commercially sensitive values cannot be published.
Constraint	Exact post-implementation improvement percentages are not available for defensible disclosure.
Open Detail	Exact SQL activities should be documented only when recalled/verified; SQL is confirmed as a project tool but detailed SQL claims are not added here.
Open Detail	Exact dashboard page count/names are not retained and should not be fabricated.
Open Detail	Exact data-cleaning rules and source-field definitions should be documented only from remembered or available evidence.
