User Stories & Acceptance Criteria

Member Retention, Utilization & Operational Analytics
December 2025 - February 2026

Document Control	Details
Document ID	IFS-USAC-001
Version	1.0
Source Basis	Confirmed engagement facts and IFS-BRD-001 business requirements.
Primary User	Gym Manager
Purpose	Translate the confirmed analytical business needs into testable user outcomes and acceptance criteria.
Evidence Note	These stories reconstruct the analytical requirements for portfolio documentation. They are not represented as historical Jira tickets or formally signed client stories.

1. User Story Summary

ID	Title	User Story	BR Traceability
US-01	Retention & Attrition Visibility	As the gym manager, I want to understand member retention and attrition so that I can identify when engagement is declining and consider appropriate retention actions.	BR-02, BR-03, BR-11
US-02	Cohort & Engagement Analysis	As the gym manager, I want members grouped by joining period and tracked over subsequent periods so that I can identify changes in attendance and retention behavior.	BR-04, BR-11
US-03	Utilization & Peak-Period Analysis	As the gym manager, I want to understand attendance and membership usage by time so that I can identify peak and underutilized periods and support operational planning.	BR-05, BR-06
US-04	Renewal & Plan Performance	As the gym manager, I want to review renewal behavior and membership-plan performance so that I can support pricing, promotion and re-engagement decisions.	BR-07, BR-08, BR-12
US-05	Trainer Utilization	As the gym manager, I want visibility into trainer sessions, bookings, workload, assignments and attendance so that I can better understand trainer utilization.	BR-09
US-06	Management Dashboard	As the gym manager, I want the key membership and operational insights consolidated in Power BI so that I can review performance without manually analyzing raw Excel records.	BR-01, BR-13
US-07	Reliable & Confidential Analysis	As the gym manager, I want the analysis to use prepared, reliable data and protect confidential information so that decisions are not based on obvious data-quality issues and restricted data is not exposed.	BR-14, BR-15

2. US-01 — Retention & Attrition Visibility

As the gym manager, I want to understand member retention and attrition so that I can identify when engagement is declining and consider appropriate retention actions.

Acceptance Criterion	Expected Behavior
AC-01.1	Given prepared membership and attendance data, when retention is analyzed for a relevant period, then the output shows the percentage of members continuing their membership for that period.
AC-01.2	Given member activity data, when attrition is analyzed, then stopped attendance and/or membership cancellation can be used as evidence of member disengagement according to the project definition.
AC-01.3	Given multiple analysis periods or member groups, when the manager reviews the output, then changes in retention/attrition behavior can be compared without reviewing raw Excel rows.
AC-01.4	The analysis must not display unsupported churn or retention percentages in public portfolio material.

3. US-02 — Cohort & Engagement Analysis

As the gym manager, I want members grouped by joining period and tracked over subsequent periods so that I can identify changes in attendance and retention behavior.

Acceptance Criterion	Expected Behavior
AC-02.1	Given member joining dates, when cohort analysis is performed, then members can be grouped by joining month.
AC-02.2	Given a joining-month cohort, when subsequent periods are reviewed, then attendance and/or retention behavior can be tracked over time.
AC-02.3	The cohort view must support identification of material engagement decline where present in the underlying data.
AC-02.4	The known post-New-Year engagement decline may be described qualitatively, but confidential counts and unsupported percentages must not be fabricated.

4. US-03 — Utilization & Peak-Period Analysis

As the gym manager, I want to understand attendance and membership usage by time so that I can identify peak and underutilized periods and support operational planning.

Acceptance Criterion	Expected Behavior
AC-03.1	Given attendance/check-in data with usable time information, when utilization is analyzed, then attendance can be compared by hour and/or day.
AC-03.2	The output must allow high-use and underutilized periods to be distinguished.
AC-03.3	Where supported by the prepared data, evening activity should be visible as an important utilization period.
AC-03.4	Utilization findings must remain traceable to the prepared attendance/membership-usage data.

5. US-04 — Renewal & Plan Performance

As the gym manager, I want to review renewal behavior and membership-plan performance so that I can support pricing, promotion and re-engagement decisions.

Acceptance Criterion	Expected Behavior
AC-04.1	Given membership and renewal information, when the manager reviews renewal behavior, then relevant renewal patterns can be inspected by period and/or plan where data permits.
AC-04.2	The analysis must support comparison of monthly, 3-month, 6-month, annual and personal-training offerings where corresponding records are available.
AC-04.3	The analytical output should provide evidence that can support discussion of renewal discounts, longer-duration plan incentives, inactive-member offers and quarterly promotions.
AC-04.4	No recommendation should be represented as having a specific financial impact unless such impact is supported by retained evidence.

6. US-05 — Trainer Utilization

As the gym manager, I want visibility into trainer sessions, bookings, workload, assignments and attendance so that I can better understand trainer utilization.

Acceptance Criterion	Expected Behavior
AC-05.1	Given available trainer/session information, when trainer utilization is reviewed, then sessions, class bookings, workload, member assignments and attendance can be considered.
AC-05.2	The output should allow differences in trainer activity/workload to be identified where supported by the data.
AC-05.3	Trainer-utilization insights may support staffing or allocation discussions but must not claim an unverified staffing outcome.

7. US-06 — Management Dashboard

As the gym manager, I want the key membership and operational insights consolidated in Power BI so that I can review performance without manually analyzing raw Excel records.

Acceptance Criterion	Expected Behavior
AC-06.1	Given the prepared analytical dataset, when the Power BI solution is opened, then key retention, attrition, utilization, renewal/plan and relevant operational insights are available in a consolidated reporting experience.
AC-06.2	Dashboard views must be built from the prepared data rather than manually entered unsupported values.
AC-06.3	Where filtering is used, displayed metrics and visuals should respond consistently to the selected analytical context.
AC-06.4	Key dashboard outputs should reconcile to the underlying prepared analysis used for the engagement.
AC-06.5	The dashboard should improve management visibility compared with manually reviewing the original unclean Excel records.

8. US-07 — Reliable & Confidential Analysis

As the gym manager, I want the analysis to use prepared, reliable data and protect confidential information so that decisions are not based on obvious data-quality issues and restricted data is not exposed.

Acceptance Criterion	Expected Behavior
AC-07.1	Known data-quality issues that materially affect analysis must be addressed or identified before the affected output is relied upon.
AC-07.2	Public portfolio outputs must exclude restricted member-level data and commercially sensitive client values.
AC-07.3	Where an exact metric, source rule or post-implementation result is not retained, the documentation must not invent a value.
AC-07.4	Qualitative findings and outcomes must be clearly distinguished from measured numerical impact.

9. Definition of Ready

- The business question or analytical objective is understood.
- Required source fields/data for the story are available or the limitation is documented.
- Relevant business definitions, such as retention or attrition, are understood for the analysis.
- Confidentiality constraints are known before producing portfolio-facing outputs.

10. Definition of Done

- The required analysis or dashboard behavior has been implemented against prepared data.
- Results reconcile to the underlying analytical dataset at an appropriate level.
- The output answers the stated user story and its applicable acceptance criteria.
- Known data limitations are documented rather than hidden.
- No confidential or unsupported values are introduced into public portfolio artifacts.
- The result is understandable to the gym manager through the delivered dashboard/report/walkthrough.

11. Traceability Summary

User Story	Business Requirements	Primary Evidence / Output
US-01	BR-02, BR-03, BR-11	Retention / attrition analysis and Power BI output
US-02	BR-04, BR-11	Cohort and engagement analysis
US-03	BR-05, BR-06	Attendance / utilization analysis
US-04	BR-07, BR-08, BR-12	Renewal and plan-performance analysis; recommendations
US-05	BR-09	Trainer-utilization analysis
US-06	BR-01, BR-13	Power BI dashboard
US-07	BR-14, BR-15	Prepared analytical data and confidentiality controls

12. Known Limitations / Open Details

- Exact historical dashboard page names and page count are not retained and are not reconstructed as facts.
- Exact member counts, row counts, revenue, churn/retention percentages and post-implementation improvement values are not disclosed or not retained.
- SQL is confirmed as a project tool, but exact SQL activities should be documented only when recalled or verified.
- These acceptance criteria are portfolio reconstruction artifacts; formal historical client acceptance/sign-off evidence is not established.
