

INFINITY FITNESS STUDIOS

KPI Catalogue

Member Retention, Utilization & Operational Analytics
December 2025 - February 2026

Document Control	Details
Document ID	IFS-KPI-001
Version	1.0
Role	Data Analyst
Purpose	Define the business meaning, analytical use and calculation intent of the KPIs used or supported by the Infinity Fitness analytics engagement.
Source Basis	Confirmed member, membership-plan, payment, attendance/check-in, joining/renewal, trainer, class-booking, revenue and expense data domains.
Important Control	Exact historical formulas, source-field names and client values are not retained. Formula wording below is a portfolio calculation specification and must be reconciled to the original data before being represented as the exact production calculation.
Confidentiality	No member-level records, commercially sensitive values or unsupported performance figures are included.

1. KPI Framework

The catalogue is intentionally focused on the metrics that support the confirmed engagement: retention and attrition, membership behavior, attendance/utilization, renewals, plan performance, trainer utilization and commercial visibility. It does not introduce unrelated gym KPIs merely to increase the catalogue size.

Dimension	KPI IDs	Decision Question
Member Retention & Attrition	MEM-01 to MEM-05	Are members staying engaged, renewing, or becoming inactive?
Utilization & Attendance	UTL-01 to UTL-04	When and how are members using the studio?
Plan & Commercial Performance	COM-01 to COM-04	How are plans, revenue and expenses performing?
Trainer Utilization	TRN-01 to TRN-03	How are trainer sessions, bookings and workload being utilized?

2. Member Retention & Attrition KPIs

ID	KPI	Business Meaning	Portfolio Calculation Intent
MEM-01	Member Retention Rate	Share of the relevant member base that continues membership over the analysis period.	Retained eligible members ÷ eligible member base × 100. Exact eligibility/window must match the agreed analysis period.
MEM-02	Member Attrition / Churn Rate	Share of members showing disengagement through stopped attendance and/or cancellation under the project definition.	Members meeting the agreed attrition rule ÷ eligible member base × 100. Stopped-attendance window must be defined before exact implementation.
MEM-03	Membership Renewal Rate	Share of memberships eligible for renewal that were renewed.	Renewed eligible memberships ÷ memberships eligible for renewal × 100.
MEM-04	Active Member Count	Number of members considered active for the selected period.	Distinct members satisfying the agreed active-membership/activity rule.
MEM-05	Cohort Retention	Retention of members grouped by joining month across subsequent periods.	For each joining-month cohort, retained/active members in a subsequent period ÷ original eligible cohort size × 100.

3. Cohort Analysis Interpretation

Members were grouped by joining month and tracked through subsequent attendance/retention periods. This approach supported identification of the post-New-Year engagement decline that became visible approximately one month later. Exact cohort counts and percentages remain confidential or are not retained.

4. Utilization & Attendance KPIs

ID	KPI	Business Meaning	Portfolio Calculation Intent
UTL-01	Total Check-ins / Attendance	Overall recorded member visits during the selected period.	Count of valid attendance/check-in records for the selected period.
UTL-02	Attendance Frequency per Member	How frequently active members use the studio.	Valid check-ins ÷ distinct relevant members for the selected period.
UTL-03	Peak Period Utilization	Periods with comparatively high attendance activity.	Aggregate valid check-ins by hour/day and rank or compare periods. Evening activity was an important observed period.
UTL-04	Underutilized Periods	Periods with comparatively low attendance activity.	Aggregate valid check-ins by hour/day and identify lower-use periods relative to the available attendance pattern.

5. Plan & Commercial Performance KPIs

ID	KPI	Business Meaning	Portfolio Calculation Intent
COM-01	Plan Membership Count	Number of memberships associated with each plan type.	Distinct memberships/members by plan for the selected period, subject to source grain.
COM-02	Plan Renewal Rate	Renewal behavior by membership plan.	Renewed eligible memberships for a plan ÷ memberships eligible for renewal for that plan × 100.
COM-03	Revenue	Commercial value recorded for the selected analysis period.	Sum of validated revenue/payment amounts classified as revenue under the prepared data.
COM-04	Expenses	Recorded business expenses for the selected analysis period.	Sum of validated expense amounts for the selected period.

Plan analysis covered monthly, 3-month, 6-month, annual and personal-training offerings where corresponding records were available. The project also used renewal and plan evidence to support discussion of renewal discounts, longer-duration incentives, inactive-member offers and quarterly promotions.

6. Trainer Utilization KPIs

ID	KPI	Business Meaning	Portfolio Calculation Intent
TRN-01	Trainer Session Count	Number of recorded sessions associated with a trainer.	Count of valid trainer-session records by trainer and selected period.
TRN-02	Trainer Booking / Attendance Volume	Demand and realized activity associated with trainer sessions/classes.	Aggregate available class bookings and attendance by trainer; exact booking-to-attendance logic depends on source fields.
TRN-03	Trainer Workload	Relative trainer activity using available sessions, bookings, member assignments and attendance.	Composite analytical view of available workload indicators. No single historical weighting/formula is asserted without source evidence.

7. KPI-to-Data Mapping

KPI Group	Primary Confirmed Data	Key Data Dependencies
Retention / Attrition	Member, joining/renewal, attendance, membership status/cancellation where available	Member identifier; analysis period; activity/renewal evidence
Cohort Retention	Member joining date, attendance/renewal	Joining month; subsequent period activity
Utilization	Attendance/check-ins	Valid date/time; member identifier
Plan Performance	Membership plan, renewal, payment	Plan classification; eligibility/renewal status
Revenue / Expenses	Payments, revenue, expenses	Validated amount; period; classification
Trainer Utilization	Trainer, sessions, class bookings, assignments, attendance	Trainer identifier; session/booking/attendance linkage

8. KPI Quality & Validation Rules

- Remove or resolve duplicate records where they would double-count members, attendance, payments, bookings or sessions.
- Standardize dates before cohort, renewal and period-based analysis.
- Standardize membership-plan labels before plan comparison.
- Validate member identifiers sufficiently to avoid counting the same member as multiple members.
- Treat missing renewal/cancellation/activity evidence carefully rather than automatically classifying it as churn.
- Reconcile revenue/expense totals to the prepared analytical source before dashboard use.
- Do not publish exact client KPI values when they are confidential or no longer retained.

9. KPI-to-Business Requirement Traceability

KPI(s)	Related BRs	Business Use
MEM-01, MEM-02	BR-02, BR-03, BR-11	Retention / attrition visibility
MEM-05	BR-04, BR-11	Cohort and engagement analysis
UTL-01 to UTL-04	BR-05, BR-06, BR-11	Attendance, peak and underutilized-period analysis
MEM-03, COM-01, COM-02	BR-07, BR-08, BR-12	Renewal and plan-performance decisions
TRN-01 to TRN-03	BR-09	Trainer-utilization visibility
COM-03, COM-04	BR-10	Commercial / financial analysis

10. Dashboard Usage

Analytical View	Primary KPIs
Retention & Attrition	Member Retention Rate, Attrition/Churn Rate, Renewal Rate, Active Member Count, Cohort Retention
Utilization	Total Check-ins, Attendance Frequency, Peak Period Utilization, Underutilized Periods
Plan / Commercial	Plan Membership Count, Plan Renewal Rate, Revenue, Expenses
Trainer Utilization	Trainer Session Count, Booking/Attendance Volume, Trainer Workload

11. Open Calculation Decisions

The following details are intentionally not invented. They should be confirmed from the original analytical files or stakeholder definition if the project is rebuilt:

- Exact inactivity window used to classify stopped-attendance churn.
- Exact eligible-member denominator for each retention/churn reporting period.
- Exact treatment of expired memberships, cancellations and missing renewal records.
- Exact source-field names and SQL logic.
- Exact revenue/expense classification rules.
- Exact trainer-workload formula or weighting, if a composite metric was used.
- Exact historical dashboard page structure and KPI display values.

12. Portfolio Governance Note

This catalogue captures the confirmed analytical scope and provides defensible calculation intent for portfolio documentation. Where an exact historical implementation detail is not retained, it is identified as an open calculation decision rather than reconstructed as fact.
