

INFINITY FITNESS STUDIOS

Findings & Recommendations

Member Retention, Utilization & Operational Analytics
December 2025 - February 2026

Document Control	Details
Document ID	IFS-FR-001
Version	1.0
Role	Data Analyst
Primary Stakeholder	Gym Manager
Purpose	Summarize the confirmed analytical findings and translate them into defensible pricing, retention and operational recommendations.
Evidence Basis	Approximately one year of Excel-based member, membership, payment, attendance/check-in, trainer, class-booking, revenue and expense data; Python/SQL/Power BI analytical workflow; stakeholder discussions; qualitative review of publicly visible page/comments.
Confidentiality	Exact client/member values, commercially sensitive figures and unsupported impact percentages are excluded.

1. Executive Summary

The analysis improved management visibility into member retention, attrition, renewal behavior, attendance/utilization and operating patterns. Cohort and attendance analysis identified a decline in member engagement following the New Year period, with the decline becoming visible approximately one month later. Attendance analysis also highlighted evening activity as an important utilization period. These findings were used to frame retention, pricing and operational recommendations.

2. Findings at a Glance

Finding	Evidence / Method	Business Meaning
Post-New-Year engagement decline	Joining-month cohort analysis, membership-duration segmentation, attendance behavior and activity over time.	Member engagement weakened after the New Year period, indicating a need for earlier retention/re-engagement attention.
Renewal behavior required clearer visibility	Membership and renewal analysis.	Management could better inspect when members were continuing or disengaging rather than relying on fragmented source records.
Evening was an important utilization period	Attendance/check-in analysis by time.	Operating demand was not uniform across the day; evening activity was comparatively important.
Underutilized periods were identifiable	Attendance analysis by hour/day and membership usage.	Lower-use periods could be surfaced for operational planning and targeted activity.
Plan behavior could be compared	Monthly, 3-month, 6-month, annual and personal-training plan analysis where data was available.	Plan duration and renewal behavior could inform pricing and promotion discussions.
Trainer activity could be analyzed	Sessions, class bookings, workload, member assignments and attendance.	Management gained a basis for understanding trainer utilization and allocation.
Commercial data could be incorporated	Revenue, payment and expense information.	Membership/operational analysis could be viewed alongside commercial performance without exposing confidential values.

3. Finding 1 - Member Engagement Decline

Members were grouped by joining month and tracked across subsequent attendance/retention periods. The analysis identified declining engagement after the New Year period, with the decline becoming visible approximately one month later. This was treated as a behavioral pattern rather than an unsupported claim that every member churned at a fixed tenure.

Attrition was interpreted using evidence of stopped attendance and/or membership cancellation. Because the exact historical inactivity threshold is not retained, this document does not invent a fixed number of inactive days.

4. Recommendation - Earlier Retention Intervention

- Monitor joining cohorts and attendance behavior for early signs of declining engagement.
- Use re-engagement offers for members who become inactive or show materially reduced attendance.
- Time retention activity before disengagement becomes prolonged rather than waiting only for final cancellation.
- Use renewal behavior together with attendance history when prioritizing retention conversations.

5. Finding 2 - Renewal & Membership Plan Opportunity

The available membership data supported analysis across monthly, 3-month, 6-month, annual and personal-training offerings. Renewal behavior and plan duration provided a practical basis for considering how pricing and offers could support member continuity.

6. Recommendations - Pricing & Renewal

Recommendation	Rationale	Guardrail
Renewal discounts	Use targeted discounts around renewal where commercially appropriate.	Exact discount percentage is not retained and should be tested rather than invented.
Longer-duration plan incentives	Encourage appropriate members toward longer-duration plans.	Do not claim a specific retention uplift without measured evidence.
Inactive-member offers	Use targeted re-engagement offers for members showing inactivity/disengagement.	Define eligibility using an agreed inactivity rule.
Quarterly offers	Use periodic promotional offers as part of the retention/promotion approach.	Evaluate response and economics before expanding.

7. Finding 3 - Utilization Was Time-Dependent

Attendance/check-in analysis by hour/day showed that utilization varied across operating periods, with evening activity emerging as an important period. The same analysis enabled lower-use periods to be identified.

8. Recommendations - Operational Utilization

- Align operational attention and resource planning with observed high-use periods.
- Use lower-use periods to test targeted classes, promotions or member-engagement activities where appropriate.
- Review attendance trends periodically rather than assuming the same demand pattern remains constant.
- Use actual check-in evidence when adjusting operational schedules.

9. Finding 4 - Trainer Utilization Could Be Made Visible

Trainer analysis considered sessions, class bookings, workload, member assignments and attendance. This created a clearer view of relative trainer activity and provided evidence for staffing/allocation discussions.

10. Recommendations - Trainer & Staffing Decisions

- Review trainer sessions, bookings and attendance together rather than using session count alone.
- Use member assignments and workload visibility to identify imbalances where the data supports them.
- Align trainer allocation with observed member demand and high-use periods.
- Avoid using a fabricated composite trainer-utilization score unless its weighting is explicitly defined.

11. Operational Context from Public Feedback

Publicly visible information from the studio's page and comments was reviewed as qualitative context for operational observations, including areas such as service experience and facility operations. This material was not treated as equivalent to structured internal attendance, membership or financial data.

Where qualitative feedback suggested an operational concern, the appropriate recommendation was to investigate it alongside internal evidence before changing staffing, cleaning or service routines. The exact operational recommendation history is not reconstructed where it is no longer remembered.

12. Recommendation Prioritization

Priority	Action	Why
High	Monitor early engagement decline and inactive-member behavior.	Directly linked to the central retention/attrition finding.
High	Strengthen renewal and re-engagement activity.	Supported by renewal and membership-behavior analysis.
High	Use utilization patterns for operational planning.	Supported by attendance/check-in evidence, including important evening activity.
Medium	Test longer-duration plan incentives and quarterly offers.	Supported as pricing/promotion recommendations; exact commercial effect requires measurement.
Medium	Use trainer workload and attendance visibility for allocation discussions.	Supported by trainer/session/booking analysis.
Investigate	Validate qualitative operational feedback against internal evidence.	Public comments provide context but are not sufficient quantitative proof.

13. Suggested Measurement After Recommendation

If the recommendations are implemented or retested, management should compare outcomes using the same KPI definitions rather than relying only on anecdotal feedback.

Recommendation Area	Measure to Monitor
Retention / re-engagement	Retention rate, attrition rate, attendance frequency, cohort retention
Renewal offers	Eligible renewals, renewed memberships, renewal rate
Longer-duration plans	Plan membership count and plan renewal behavior
Utilization actions	Check-ins by hour/day, peak and underutilized periods
Trainer allocation	Sessions, bookings, assignments and attendance by trainer
Commercial actions	Validated revenue/payment and expense measures where appropriate

14. Business Outcome

The engagement gave the gym manager clearer visibility into renewal behavior, member engagement and underutilized periods. The manager provided positive feedback, and recommendations were used in the business. The user recalls a positive result from implemented recommendations; however, exact post-implementation percentages or financial impact are not retained for defensible public disclosure.

15. What This Case Study Does Not Claim

- It does not claim a specific churn, retention, revenue or ROI improvement percentage.
- It does not claim that all members churn after a fixed number of months.
- It does not invent an exact discount percentage or promotion structure.
- It does not present public comments as structured internal business data.
- It does not invent the exact operational recommendations that are no longer remembered.
- It does not expose member-level or commercially sensitive client information.

16. Management Action Matrix

Business Question	Finding	Recommended Action
When does engagement weaken?	Decline visible after the New Year period, approximately one month later.	Use cohort monitoring and earlier re-engagement.
How can renewal behavior be supported?	Renewal patterns can be analyzed alongside plan and attendance information.	Use targeted renewal discounts and re-engagement offers.
Can plan structure support retention?	Multiple plan durations allow behavioral comparison.	Test appropriate longer-duration incentives.
When is the studio most/least used?	Attendance varies by time; evening is important and lower-use periods can be identified.	Align resources to demand and test activity in lower-use periods.
How should trainer activity be reviewed?	Sessions, bookings, workload, assignments and attendance provide complementary views.	Use multiple workload indicators for allocation decisions.
How should qualitative complaints be used?	Public comments provide context, not quantitative proof.	Validate concerns with internal evidence before operational changes.
