Overdue Work Order Rule

A work order is considered overdue if:
Due Date < Current Date AND Status ≠ Completed

Recent Work Orders						
Work Order #	Asset / Equipment	Work Type	Priority	Status	Due Date	Completion Date
—	—	—	Low	—	—	—
—	—	—	Medium	—	—	—
—	—	—	High	—	—	—
—	—	—	Critical	—	—	—

💡 Key Insights

- Overall work order completion rate is 92%.
- Monitor overdue work orders to improve operational efficiency.
- Analyse work order trends to identify recurring issues.
- Focus on high-priority pending work and workload distribution across teams.
- Track maintenance categories and asset performance to optimise resource utilisation.

Key Insights

- Overall work order completion rate is 92%.
- Overdue work orders are defined as: Due Date < Current Date AND Status ≠ Completed.
- Monitor high-priority pending work and workload distribution across teams.
- Focus on recurring categories and high-usage assets to reduce repeat work.

Business Impact

- High completion rate supports operational reliability.
- Reducing overdue work improves safety and asset availability.
- Balanced workload drives better resource utilisation.
- Targeting recurring issues can lower maintenance costs.

High-Priority Pending Work Orders

Work Order #	Asset / Equipment	Priority	Status	Due Date	Days Overdue
-	-	High	Pending	-	-
-	-	High	Open	-	-
-	-	Critical	Open	-	-
-	-	Critical	Pending	-	-
-	-	High	On Hold	-	-

Key Insights

- Monitor backlog and overdue work orders to minimise operational risk.
- Focus on resolving high-priority pending work orders.
- Identify assets with recurring delays.
- Use priority and asset analysis to optimise resource allocation.
- Track trends to prevent backlog build-up.

Next Steps

- Clear high-priority and overdue work orders.
- Investigate recurring delays by asset.
- Align resources based on priority and workload.
- Implement preventive maintenance to reduce future backlog.
- Monitor backlog trends regularly.

Focus

Monitor team and technician performance to improve productivity and reduce overdue work orders.

Technician Performance Summary

Technician	Team	Assigned Work Orders	Completed	Completion Rate	Avg. Completion Time (Days)
Technician 1	-	-	-	-	-
Technician 2	-	-	-	-	-
Technician 3	-	-	-	-	-
Technician 4	-	-	-	-	-
Technician 5	-	-	-	-	-

Key Insights

- Overall work order completion rate is 92%.
- Track technician performance to identify training and support needs.
- Balance workload across teams to improve efficiency.
- Focus on reducing overdue work orders.
- Recognise high performers and best practices across teams.

Next Steps

- Investigate recurring delays for overdue work orders.
- Optimise resource allocation based on workload.
- Provide targeted support and training where needed.
- Monitor performance trends regularly.
- Use insights to improve maintenance planning and operational reliability.

Asset / Equipment Overview

Key Insights

- Overall work order completion rate is 92%.
- Focus on reducing overdue work orders to improve operational efficiency.
- Monitor high-priority pending work and workload distribution across teams.
- Track recurring categories and high-usage assets to reduce repeat work.

Business Impact

- High completion rate supports operational reliability.
- Timely resolution of overdue work improves safety and asset availability.
- Better workload balance enhances team productivity.
- Targeting recurring issues can lower maintenance costs.

Focus Areas

- Reduce overdue work orders.
- Address high-priority pending work.
- Optimise resource allocation across teams.
- Monitor top maintenance categories and assets.
- Strengthen preventive maintenance to minimise repeat work.
