Version	1.0
Project	ReferMe Investments - Investment Analytics & Decision-Support Framework
Project Period	February - June 2026
Purpose	Identify stakeholder groups, their interests, influence, expected contribution, communication needs and BA engagement approach.
Source Discipline	Only stakeholder groups supported by the existing project report are treated as project stakeholders. Individual names are not invented.

1. Purpose

This Stakeholder Register identifies the stakeholder groups involved in or affected by the ReferMe Investments investment analytics project. It supports requirements elicitation, communication planning, decision ownership, validation and project governance.

2. Stakeholder Identification

The existing project documentation identifies six stakeholder groups. The register below preserves those groups. Influence, engagement and communication classifications are BA planning recommendations for the case study and should be adjusted if actual named stakeholders or project governance evidence becomes available.

3. Detailed Stakeholder Register

ID	Stakeholder Group	Role	Primary Interest	Influence	Interest	Strategy	BA Engagement	Communication	Key Contribution / Decision Area
STK-01	Investment / Underwriting Team	Primary business user / decision maker	Consistent investment evaluation, score transparency, risk visibility and recommendation support	High	High	Managerially	Requirements workshops, KPI/scoring validation, UAT, decision-rule review	Working sessions during requirements/design; formal review at scoring/UAT milestones	Business requirements, KPI definitions, scoring logic, recommendation rules, UAT sign-off
STK-02	Senior Management	Executive sponsor / decision	Portfolio quality, investment pipeline visibility,	High	Medium-High	Keep Satisfied	Executive requirement interviews,	Milestone / decision-point updates and final	Scope/success criteria, executive dashboard needs,

		consumer	strategic decision support and major risk exposure				milestone reviews, dashboard walkthroughs	management review	material methodology decisions, release approval
STK-03	Finance / Investment Analysts	Subject-matter contributor / analytical user	Financial strength, profitability, cash generation, growth and comparability of investment targets	High	High	Manage Closely	KPI-definition workshop, formula validation, reconciliation and UAT	Frequent during KPI/data design and validation	Financial KPI definitions, calculations, benchmark assumptions, financial data validation
STK-04	Operations / Portfolio Team	Operational SME / post-investment user	Operational efficiency, customer performance, targets, portfolio trends and deterioration	Medium-High	High	Manage Closely	Process workshop, operational KPI validation, monitoring/alert requirements, UAT	Regular during process/dashboard design; periodic post-investment review	Operational/customer KPI definitions, monitoring requirements, targets and mitigation actions

indicators									
STK-05	Data / BI Team	Technical delivery / data stakeholder	Reliable source data, clear transformations, semantic model, KPI calculations and usable Power BI reporting	High	High	Managed Closely	Data workshops, STTM review, model/design sessions, defect triage and UAT support	Frequent throughout data design, build and testing	Data mapping, validation rules, Power BI implementation, technical feasibility, data-quality reporting
STK-06	Investment Target	External /source-data stakeholder	Clear information requests, accurate representation of business performance and efficient clarification process	Medium	Medium	Keep informed / Consult	Structured data request, clarification sessions and exception follow-up	At intake and whenever data gaps/clarifications arise	Source business information, clarification of submitted data and evidence

4. Power-Interest Analysis

Quadrant	Stakeholders	Recommended BA Approach
High Power / High Interest - Manage Closely	Investment / Underwriting; Finance / Investment Analysts; Data / BI	Frequent collaboration, workshops, requirement validation, rapid issue resolution and formal sign- off at relevant gates.
High Power / Moderate Interest - Keep Satisfied	Senior Management	Concise executive updates focused on decisions, risks, portfolio impact and major methodology changes.
Moderate Power / High Interest - Manage Closely	Operations / Portfolio	Detailed involvement in operational KPIs, monitoring, alerts, target- setting and post-investment requirements.
Moderate Power / Moderate Interest - Consult / Keep Informed	Investment Target	Clear data requests, structured clarification, limited governance overhead and transparent handling of data issues.

5. Stakeholder Communication Plan

Stakeholder	Information Needed	Format / Channel	Indicative Cadence	Owner
Investment / Underwriting	Requirements, scoring assumptions, open decisions, UAT outcomes	Workshop / review meeting / documented decision log	During requirements, scoring and UAT milestones	Business Analyst
Senior Management	Progress, major risks, decision points, dashboard outcome	Executive summary / dashboard walkthrough	At major milestones	Business Analyst / Business Owner
Finance / Investment Analysts	Financial KPI definitions, formulas, data exceptions, reconciliation	Working session / spreadsheet or specification review	Frequent during KPI/data validation	Business Analyst
Operations / Portfolio	Operational/customer KPIs, monitoring, targets, alerts	Workshop / dashboard review	During process and monitoring design	Business Analyst
Data / BI Team	Requirements, STTM, data-quality rules, Power BI behavior, defects	Technical working session / backlog / specification	Frequent throughout design-build-test	Business Analyst
Investment Target	Required data, missing fields, clarification requests	Structured data request / clarification communication	At intake and as required	Investment / Underwriting + BA

6. Stakeholder Requirements / Concerns

Stakeholder	Key Requirements / Concerns to Track
Investment / Underwriting	Score transparency; defensible recommendation; ability to inspect underlying KPIs; critical-risk visibility.
Senior Management	Clear portfolio view; concise decision support; comparability; major risk exposure.
Finance / Investment Analysts	Correct formulas; reliable financial inputs; consistent period definitions; reconciled outputs.
Operations / Portfolio	Operational performance; customer health; actual-vs-target monitoring; actionable alerts.
Data / BI Team	Unambiguous field definitions; source-to-target mapping; calculable KPIs; data-quality controls; testable acceptance criteria.
Investment Target	Unambiguous data requests; reasonable clarification process; no unsupported interpretation of missing information.

7. Stakeholder Risks

Risk	Affected Stakeholder(s)	Potential Impact	BA Response
Scoring weights or thresholds are not agreed	Investment / Underwriting; Senior Management; Finance	Recommendation logic may be disputed or misleading	Keep methodology configurable; document assumptions; obtain explicit approval before production use.
KPI definitions are interpreted differently	Finance; Operations; Data / BI	Inconsistent calculations and loss of trust	Maintain KPI catalogue, examples, acceptance criteria and reconciliation evidence.
Source data is incomplete or inconsistent	Investment Target; Data / BI; Analysts	Low-confidence evaluation and missing trend calculations	Use structured intake, validation rules and visible Data Quality Score/status.
Executive users receive too much detail	Senior Management	Dashboard becomes difficult to use for decisions	Separate executive overview from drill-down/detail pages.
Technical feasibility differs from requested behavior	Data / BI; Investment / Underwriting	Rework or delayed delivery	Validate feasibility early and record decisions/change impacts.

8. Stakeholder Engagement Principles

Do not treat proposed scoring assumptions as approved business rules until the appropriate business stakeholder validates them.

Separate executive decision needs from analyst-level drill-down requirements.

Record material requirement and methodology decisions in the Decision Log.

Use the RTM to preserve traceability from stakeholder need to requirement, test and dashboard output.

Escalate unresolved data-quality or methodology issues before they become hidden assumptions in the final score.

Replace stakeholder-group labels with actual names only when legitimate project evidence is available.

9. Review / Sign-off

Individual stakeholder names are intentionally left blank because the source project documentation does not establish them.

Role / Group	Name	Review Status	Date
Investment / Underwriting Representative	_____	Reviewed / Pending	_____
Senior Management Sponsor	_____	Reviewed / Pending	_____
Finance / Investment Analyst Representative	_____	Reviewed / Pending	_____
Operations / Portfolio Representative	_____	Reviewed / Pending	_____
Data / BI Representative	_____	Reviewed / Pending	_____
Business Analyst / Document Owner	_____	Baseline	_____
