Business Requirements Document (BRD)

Investment Analytics & Decision-Support Framework

Document Control	Details
Document ID	RMI-BRD-001
Project	Investment Analytics & Decision-Support Framework
Project Period	February - June 2026
Version	1.0
Status	Portfolio
Methodology control	Scoring weights, thresholds and technical implementation details require stakeholder approval before production use.

1. Purpose

Define the business problem, objectives, scope, stakeholders, high-level requirements, business rules, success criteria and acceptance boundaries for a standardized investment-evaluation and portfolio-monitoring capability.

2. Business Context & Problem Statement

Investment evaluation can become inconsistent when analysts use different metrics, definitions and weighting logic. The project establishes a common framework linking business evidence to 28 KPIs, five evaluation dimensions, a 0-100 Investment Score, recommendation support and post-investment monitoring.

3. Business Objectives

Standardize evaluation across Financial Strength, Operational Performance, Growth, Customer Health and Risk.

Make different service-business targets comparable through common KPI definitions and normalized scoring.

Provide transparent drill-down from recommendation to dimension scores and underlying KPIs.

Identify material deterioration and concentration risk earlier through portfolio monitoring and alerts.

Expose data-quality limitations so weak evidence is not mistaken for weak or strong business performance.

4. Success Criteria

Every KPI, chart and dataset supports a better, more consistent investment decision.

Investment targets are comparable through common definitions and scoring logic.

Risk deterioration is visible through monitoring and early-warning indicators.

Methodology assumptions remain transparent and subject to stakeholder validation.

5. Scope

In Scope	Out of Scope / Not Established
Investment evaluation framework for service businesses	Actual proprietary ReferMe underwriting rules

28 KPI definitions across five dimensions	Final approved production scoring thresholds
Illustrative 0-100 weighted scoring methodology	Claims that sample business data is ReferMe's real portfolio
Five-page Power BI decision layer	Production deployment architecture
Investment evaluation and portfolio monitoring concepts	Legal, tax, valuation or investment advice

6. Stakeholders

Stakeholder	Primary Interest	BA Engagement
Investment / Underwriting Team	Consistent investment decisions	Elicit decision criteria; validate KPIs/scoring
Senior Management	Portfolio quality and strategic visibility	Executive requirements; scorecards; recommendations
Finance / Investment Analysts	Financial health and cash generation	KPI definitions; calculations; benchmarks
Operations / Portfolio Team	Operating efficiency and post-investment performance	Operational KPIs; targets; monitoring
Data / BI Team	Reliable data model and dashboards	Source-to-KPI mapping; acceptance criteria; data quality
Investment Target	Clear information requests and evaluation transparency	Define required inputs and clarification process

7. Business Requirements

ID	Business Requirement	Priority
BR-01	System shall evaluate each investment target across five dimensions: Financial Strength, Operational Performance, Growth, Customer Health and Risk.	Must
BR-02	System shall calculate and display at least 25 investment-relevant KPIs; target framework contains 28.	Must
BR-03	System shall convert KPI performance into comparable dimension scores.	Must
BR-04	System shall produce an overall 0-100 Investment Score using validated dimension weights.	Must
BR-05	System shall support an investment recommendation outcome such as Invest, Review or Reject once thresholds are approved.	Must
BR-06	Users shall be able to inspect underlying KPIs behind a business score.	Must
BR-07	System shall provide portfolio-level monitoring of actual vs target, KPI trends,	Must

	score changes and risk changes.	
BR-08	System shall surface early-warning indicators for material deterioration or concentration risks.	Should
BR-09	Dashboard shall support business-level drill-down across revenue, customers, profitability, operations, growth and risk.	Must
BR-10	Data quality shall be measured as part of the risk framework.	Should

8. Business Rules & Methodology Assumptions

Rule ID	Rule / Assumption	Control
BRULE-01	The evaluation framework uses five dimensions: Financial Strength, Operational Performance, Growth, Customer Health and Risk.	Source-supported
BRULE-02	The target framework contains 28 investment-relevant KPIs.	Source-supported
BRULE-03	The overall Investment Score uses a 0-100 architecture.	Source-supported
BRULE-04	Proposed dimension weights are Financial 25%, Operational 20%, Growth 20%, Customer Health 15%, Risk 20%.	Proposed; requires approval

BRULE-05	Invest / Review / Reject may be produced only after decision thresholds are approved.	Requires approval
BRULE-06	Higher risk must not be interpreted as a positive score without an explicit normalization rule.	Requires scoring design validation
BRULE-07	Data quality must be visible alongside the evaluation.	Source-supported
BRULE-08	A composite score must not hide a critical weakness; underlying KPI/dimension drill-down remains available.	Source-supported

9. High-Level Process

Standardized data intake -> data-quality validation -> calculate 28 KPIs -> normalize KPI performance -> calculate five dimension scores -> calculate overall Investment Score -> recommendation support -> management review -> post-investment monitoring -> risk alerts and mitigation.

10. Business Risks, Assumptions & Dependencies

Type	Item	Impact	Mitigation / Action
Risk	Scoring weights not validated	Misleading investment ranking	Run stakeholder calibration and sensitivity testing
Risk	Different business models have different benchmarks	Unfair cross-business comparison	Use segment-aware benchmarks where required

Risk	Incomplete source data	Weak KPI reliability	Data-quality controls and confidence flag
Risk	Composite score hides critical weakness	False positive investment decision	Always expose dimension/KPI drill-down and override rules
Assumption	Required financial/operational/customer data can be obtained	Framework depends on adequate inputs	Validate data availability during discovery
Assumption	0-100 scoring is acceptable for decision support	Enables common comparison	Confirm with investment stakeholders
Dependency	Power BI data model and refresh	Dashboard usability	Define source mapping and refresh ownership
Dependency	Business-approved thresholds	Recommendations and alerts	Do not productionize labels until approved

11. Business Acceptance Criteria

Approved requirements are traceable to functional requirements, user stories, UAT cases and dashboard outputs.

KPI definitions, formulas, data needs and ownership are validated before production use.

Scoring weights, thresholds and recommendation logic receive explicit business approval.

Dashboard figures reconcile to approved source/test data.

Data-quality limitations and methodology assumptions are visible and documented.
