

REFERME INVESTMENTS

REQUIREMENTS TRACEABILITY MATRIX (RTM)

Investment Analytics & Decision-Support Framework
February - June 2026

Document Control	Details
Document ID	RMI-RTM-001
Version	1.0
Purpose	Provide end-to-end traceability from business requirements through functional requirements, user stories, UAT scenarios and Power BI outputs.
Coverage	BR-01 to BR-10, related FRs, US-01 to US-05 and UT-01 to UT-09.
Source Discipline	Mappings are taken from the existing ReferMe Investments project report. No execution status or approval outcome is invented.

1. Purpose

The Requirements Traceability Matrix confirms that each business requirement is linked to solution behavior, a user need, a validation scenario and a defined output. It is used to identify requirement gaps, control scope changes and support UAT coverage.

2. Traceability Model

Business Requirement (BR) -> Functional Requirement (FR) -> User Story (US) -> UAT Scenario (UT) -> Power BI / Solution Output.

Important: the source contains UAT scenarios and expected results, but it does not provide evidence that UAT was actually executed or formally signed off. Therefore this RTM records planned validation coverage, not claimed test completion.

3. Master Requirements Traceability Matrix

BR	Business Requirement	FR	Functional Requirement	US	User Story	UAT	Validation Scenario	Output
BR-01	System shall evaluate each investment target across five dimensions: Financial Strength, Operational Performance, Growth, Customer Health and Risk.	FR-04	FR-04: Calculate five dimension scores using approved KPI weights.	US-02	US-02: As an underwriter, I want to drill into a target's five dimension scores so that I can understand the drivers of the recommendation.	UT-02	UT-02: Dimension scoring	Power BI Page 2
BR-02	System shall calculate and display at least 25 investment-relevant KPIs; target framework contains 28.	FR-02	FR-02: Calculate KPI values from validated financial, operational, customer and risk inputs.	US-02	US-02: As an underwriter, I want to drill into a target's five dimension scores so that I can understand the drivers of the recommendation.	UT-01	UT-01: KPI calculation	Pages 2-3
BR-03	System shall convert KPI performance into comparable dimension scores.	FR-03/04	FR-03: Normalize KPI values to a common scoring scale according to approved thresholds.	US-02	US-02: As an underwriter, I want to drill into a target's five dimension scores so that I can understand the drivers of the recommendation.	UT-02	UT-02: Dimension scoring	Page 2
BR-04	System shall produce an overall 0-100 Investment Score using validated dimension weights.	FR-05	FR-05: Calculate overall Investment Score using approved dimension weights.	US-01/02	US-01: As an investment analyst, I want to view all businesses with their investment scores so that I can prioritize due diligence.	UT-03	UT-03: Investment scoring	Pages 1-2
BR-05	System shall support an investment recommendation outcome such as Invest, Review or Reject once thresholds are approved.	FR-05	FR-05: Calculate overall Investment Score using approved dimension weights.	US-01	US-01: As an investment analyst, I want to view all businesses with their investment scores so that I can prioritize due diligence.	UT-04	UT-04: Recommendation	Page 1
BR-06	Users shall be able to inspect underlying KPIs behind a business score.	FR-07	FR-07: Provide individual Investment Evaluation view with overall and dimension scores.	US-02	US-02: As an underwriter, I want to drill into a target's five dimension scores so that I can understand the drivers of the recommendation.	UT-05	UT-05: Drill-down	Page 2
BR-07	System shall provide portfolio-level monitoring of actual vs target, KPI trends, score changes and risk changes.	FR-09	FR-09: Provide Portfolio Monitoring for actual vs target, trends, score changes and early warnings.	US-03	US-03: As a portfolio manager, I want actual-vs-target and score trends so that I can detect post-investment deterioration.	UT-06	UT-06: Portfolio trend	Page 4
BR-08	System shall surface early-warning indicators for material deterioration or concentration risks.	FR-10	FR-10: Provide Risk & Alerts view for revenue decline, churn, margin deterioration, concentration and cash-flow performance.	US-04	US-04: As a risk reviewer, I want alerts for declining revenue, high churn, margin deterioration and concentration so that I can investigate early.	UT-07	UT-07: Risk alert	Page 5

BR-09	Dashboard shall support business-level drill-down across revenue, customers, profitability, operations, growth and risk.	FR-08	FR-08: Provide Business Profile trends for revenue, customers, profitability, operations, growth and risk.	US-02	US-02: As an underwriter, I want to drill into a target's five dimension scores so that I can understand the drivers of the recommendation.	UT-08	UT-08: Business profile	Page 3
BR-10	Data quality shall be measured as part of the risk framework.	FR-12	FR-12: Expose data-quality status to prevent false confidence in incomplete evaluations.	US-05	US-05: As a decision maker, I want data-quality visibility so that I can distinguish weak performance from weak evidence.	UT-09	UT-09: Data quality	Pages 2/5

4. UAT Coverage Detail

Test ID	Mapped BR	Scenario	Test Data / Action	Expected Result
UT-01	BR-02	KPI calculation	Load complete valid test data	All applicable KPIs calculate with no unexpected blanks
UT-02	BR-01, BR-03	Dimension scoring	Provide KPI scores and approved weights	Dimension score equals weighted KPI result
UT-03	BR-04	Investment scoring	Provide five dimension scores	Overall score equals approved weighted calculation
UT-04	BR-05	Recommendation	Use test scores around approved thresholds	Correct Invest/Review/Reject label returned
UT-05	BR-06	Drill-down	Select one investment target	Underlying dimension/KPI values reconcile to summary
UT-06	BR-07	Portfolio trend	Load multiple periods	Actual-vs-target and score/risk changes display correctly
UT-07	BR-08	Risk alert	Create threshold-breach scenario	Relevant warning appears for affected business
UT-08	BR-09	Business profile	Select target	Financial, customer, operations, growth and risk trends filter correctly
UT-09	BR-10	Data quality	Remove/invalid required inputs	Data-quality status declines and limitation is visible

5. Coverage Summary

Coverage Area	Source-Supported Status
Business Requirements	10 requirements defined: BR-01 through BR-10
Functional Requirements	12 requirements defined: FR-01 through FR-12
User Stories	5 user stories defined: US-01 through US-05
UAT Scenarios	9 validation scenarios defined: UT-01 through UT-09
Decision Outputs	Traceability covers Power BI Pages 1-5
Execution Evidence	Not established by the source project report
Formal Sign-off	Not established by the source project report

6. Traceability Controls

- A change to a BR should be assessed for impact on linked FRs, user stories, UAT scenarios and dashboard outputs.
- A change to scoring weights, KPI definitions or recommendation thresholds should trigger calculation and UAT impact analysis.
- A requirement should not be marked complete solely because a dashboard visual exists; its acceptance criteria and validation scenario must also be satisfied.
- Any new requirement introduced after baseline should receive a unique ID and be added to the RTM through change control.
- UAT execution status should only be populated when actual test evidence is available.
