

REFERME INVESTMENTS

USER STORIES & ACCEPTANCE CRITERIA

Investment Analytics & Decision-Support Framework
February - June 2026

Document Control	Details
Document ID	RMI-USAC-001
Version	1.0
Purpose	Define source-supported user needs and testable acceptance criteria for the ReferMe Investments analytics solution.
Scope	Investment Overview, Investment Evaluation, Portfolio Monitoring, Risk & Alerts, and Data Quality visibility.
Source Discipline	User stories are based on the existing ReferMe project report. No unsupported production outcomes or business rules are asserted.

1. Purpose

This document converts the project's business needs into user-centered requirements with clear acceptance criteria. It supports requirements validation, solution design, traceability and UAT.

2. User Story Standard

Format: As a <user>, I want <capability>, so that <business value>. Acceptance criteria describe observable conditions that must be satisfied before the story can be accepted.

3. User Stories & Acceptance Criteria

US-01 - Prioritize investment opportunities

User Story: As an Investment / Underwriting user, I want a portfolio-level overview of evaluated businesses so that I can quickly prioritize opportunities for deeper review.

Primary User: Investment / Underwriting User

Acceptance Criteria

1. The overview displays the investment pipeline and number of businesses evaluated.
2. The overview displays the average Investment Score.
3. The overview displays counts or status for Invest, Review and Reject once recommendation thresholds are approved.
4. The overview displays portfolio-level indicators for Risk, Growth and Financial Strength.
5. Users can move from portfolio-level information to business-level analysis.

US-02 - Understand the basis of an investment score

User Story: As an Investment / Underwriting user, I want to drill into a selected business's overall score and underlying KPI performance so that I can understand the evidence behind the investment assessment.

Primary User: Investment / Underwriting User

Acceptance Criteria

1. A selected business can be identified in the Investment Evaluation view.
2. The overall Investment Score is displayed on a 0-100 scale when the scoring configuration is available.
3. The five dimension scores are displayed: Financial Strength, Operational Performance, Growth, Customer Health and Risk.
4. Users can inspect underlying KPIs contributing to the dimension-level assessment.
5. The view does not hide material risk or data-quality information behind the composite score.

US-03 - Monitor actual performance against expectations

User Story: As an Operations / Portfolio user, I want to monitor actual versus target performance and KPI trends so that I can identify deterioration or emerging issues after investment.

Primary User: Operations / Portfolio User

Acceptance Criteria

1. Portfolio Monitoring supports actual-versus-target comparison where target data is available.
2. KPI trend information is displayed where sufficient historical data exists.
3. Changes in Investment Score and risk status can be monitored where historical evaluation data exists.

- The solution identifies businesses requiring attention based on configured monitoring logic.
- The solution does not fabricate trends when historical data is unavailable.

US-04 - Identify material risk signals

User Story: As a Risk / Investment user, I want early-warning indicators for material business deterioration so that I can investigate risks before they become more severe.

Primary User: Risk / Investment User

Acceptance Criteria

- Risk & Alerts can surface revenue decline signals where the required historical data exists.
- Risk & Alerts can surface customer churn signals where the required customer data exists.
- Risk & Alerts can surface margin deterioration, customer concentration and cash-flow risk signals where the required data exists.
- Alert logic is based on defined and approved rules or thresholds.
- Users can identify the affected business and the risk category behind an alert.

US-05 - See data-quality limitations

User Story: As an analyst or investment decision user, I want data-quality status to be visible so that I can judge how much confidence to place in the evaluation.

Primary User: Analyst / Decision User

Acceptance Criteria

- Data Quality Score or status is available as part of the risk framework.
- Missing, incomplete or invalid required inputs can be identified.
- Data-quality limitations are visible in relevant business-level analysis.
- The solution does not silently convert missing evidence into a positive investment signal.
- Data-quality issues can be traced to the relevant business/data input where the source data supports that traceability.

4. Story-to-Requirement Traceability

User Story	Related Business Requirement(s)	Related Functional Requirement(s)	Primary Dashboard / Output
US-01	BR-01, BR-05, BR-06	FR-06, FR-11	Investment Overview
US-02	BR-01, BR-02, BR-03, BR-04, BR-06, BR-09	FR-02, FR-03, FR-04, FR-05, FR-07, FR-11	Investment Evaluation / Business Profile
US-03	BR-07, BR-09	FR-08, FR-09, FR-11	Portfolio Monitoring / Business Profile
US-04	BR-08	FR-10, FR-11	Risk & Alerts
US-05	BR-10	FR-12	Investment Evaluation / Business Profile / Risk views

5. Definition of Ready

- The business objective and intended user are clear.
- Relevant KPI/data requirements are identified.
- Dependencies or assumptions affecting the story are documented.
- Acceptance criteria are understandable and testable.
- Open scoring thresholds, benchmark assumptions or data limitations are explicitly identified rather than assumed.

6. Definition of Done

- The implemented behavior satisfies the approved acceptance criteria.
- Relevant calculations are reconciled against validated source inputs.
- Required dashboard interactions and drill-down behavior work as specified.
- Data-quality and risk conditions are displayed as required.
- The story is traceable to requirements and UAT evidence.
- Critical defects affecting the story are resolved before acceptance.
- Any unresolved assumptions or limitations are documented and accepted by the appropriate stakeholder.
