

REFERME INVESTMENTS

DATA DICTIONARY

Investment Analytics & Decision-Support Framework
February - June 2026

Document Control	Details
Document ID	RMI-DD-001
Version	1.0
Purpose	Define the logical data elements required to support the ReferMe Investments KPI, scoring and Power BI requirements.
Source Basis	Business Master, Financial, Workforce & Operations, Customers, Time, Scoring and Data Quality domains established in the project report.
Important Note	This is a logical BA data dictionary. Physical database column names, SQL data types, source-system names, field lengths, nullability and production validation rules are not established by the source and are therefore not invented.

1. Data Dictionary Scope

The dictionary translates the project's representative data fields into a structured logical catalogue. It supports requirements clarification, source-to-target mapping, KPI calculation design, Power BI modelling, data-quality review and UAT preparation.

2. Data Domains

Domain	Source-Supported Representative Fields	Primary Use
Business Master	Business ID, type, evaluation status	Target identification and filtering
Financial	Revenue, gross profit, EBITDA, operating cash flow, costs	Financial Strength / Risk
Workforce & Operations	Employees, labor cost, capacity, on-time service	Operational Performance
Customers	Customer count, new/lost/repeat customers, complaints, customer revenue	Growth / Customer Health / concentration
Time	Month / quarter / year	Trends, CAGR, volatility, actual vs target
Scoring	KPI score, dimension score, investment score, recommendation	Decision support
Data Quality	Missing, invalid, duplicate or stale input indicators	Data Quality Score / confidence

3. Logical Data Element Catalogue

ID	Domain	Logical Data Element	Business Definition / Intent	Logical Type	Used For	Traceability
DD-001	Business Master	Business ID	Unique logical identifier for an investment target.	Identifier / Text	Target identification, filtering	FR-01
DD-002	Business Master	Business Type	Service-business category/type of the investment target.	Category / Text	Filtering, business profile; benchmark segmentation may be future/validated	FR-01
DD-003	Business Master	Evaluation Status	Status of the target within the evaluation process.	Status / Text	Pipeline / evaluation filtering	FR-01, FR-06
DD-004	Financial	Revenue	Top-line business revenue for the applicable period.	Currency / Numeric	Revenue; Revenue Growth %; margins; revenue/employee; ARPC; CAGR; volatility	FR-02
DD-005	Financial	Gross Profit	Revenue less direct cost basis used for gross profit.	Currency / Numeric	Gross Margin %	FR-02
DD-006	Financial	EBITDA	Earnings before interest, taxes, depreciation and amortization.	Currency / Numeric	EBITDA Margin %	FR-02
DD-007	Financial	Operating Cash Flow	Cash generated from operating activities.	Currency / Numeric	Operating Cash Flow; Cash Flow	FR-02

					Margin %; Cash Flow Risk	
DD-008	Financial	Operating Costs	Operating cost amount applicable to the evaluation period.	Currency / Numeric	Operating Cost %; operational analysis	FR-02
DD-009	Workforce & Operations	Employee Count	Number of employees applicable to the evaluated period.	Count / Numeric	Revenue per Employee	FR-02
DD-010	Workforce & Operations	Labor Cost	Labor cost amount for the evaluated period.	Currency / Numeric	Labor Cost %	FR-02
DD-011	Workforce & Operations	Capacity	Available/service capacity measure for the evaluated period.	Numeric	Capacity Utilization %	FR-02
DD-012	Workforce & Operations	On-Time Service	Measure/count supporting on-time service performance.	Numeric	On-Time Service %	FR-02
DD-013	Customers	Customer Count	Number of customers for the applicable period.	Count / Numeric	Customer Growth %, ARPC, retention/churn context	FR-02

DD-014	Customers	New Customers	Customers acquired during the applicable period.	Count / Numeric	New Customer Acquisition; Customer Growth %	FR-02
DD-015	Customers	Lost Customers	Customers lost during the applicable period.	Count / Numeric	Customer Churn %; retention analysis	FR-02
DD-016	Customers	Repeat Customers	Customers meeting the project's repeat-customer definition.	Count / Numeric	Repeat Customer Rate	FR-02
DD-017	Customers	Customer Complaints	Complaint count/measure for the applicable period.	Count / Numeric	Customer Complaint Rate	FR-02
DD-018	Customers	Customer Revenue	Revenue attributable at customer level where available.	Currency / Numeric	Customer Concentration % / risk	FR-02
DD-019	Time	Month	Monthly time attribute associated with a record.	Time / Date attribute	Monthly trends, monitoring	FR-08, FR-09
DD-020	Time	Quarter	Quarterly time attribute associated with a record.	Time / Date attribute	Quarterly analysis / filtering	FR-08, FR-09
DD-021	Time	Year	Year associated with a record.	Time / Date attribute	Annual analysis, CAGR context	FR-08, FR-09

DD-022	Scoring	KPI Score	Normalized score assigned to a KPI under approved scoring rules.	Score / Numeric	Dimension scoring, KPI drill-down	FR-03, FR-04
DD-023	Scoring	Dimension Score	Calculated score for one of the five evaluation dimensions.	Score / Numeric	Investment Evaluation; overall scoring	FR-04, FR-07
DD-024	Scoring	Investment Score	Overall 0-100 score calculated using validated dimension weights.	Score / Numeric	Overview, evaluation, prioritization	FR-05, FR-06, FR-07
DD-025	Scoring	Recommendation	Decision-support outcome such as Invest, Review or Reject once thresholds are approved.	Status / Text	Overview and investment decision support	BR-05, FR-06
DD-026	Data Quality	Missing Input Indicator	Indicator that a required input is missing.	Indicator / Boolean or status	Data-quality assessment / confidence	FR-12
DD-027	Data Quality	Invalid Input Indicator	Indicator that an input fails an approved validity rule.	Indicator / Boolean or status	Data-quality assessment / confidence	FR-12

DD-028	Data Quality	Duplicate Input Indicator	Indicator that a duplicate record/input has been identified under an approved rule.	Indicator / Boolean or status	Data-quality assessment / confidence	FR-12
DD-029	Data Quality	Stale Input Indicator	Indicator that an input is stale under an approved freshness rule.	Indicator / Boolean or status	Data-quality assessment / confidence	FR-12
DD-030	Data Quality	Data Quality Score / Status	Visible assessment of input-data quality/confidence.	Score / Status	Risk dimension and decision confidence	BR-10, FR-12

4. Derived KPI / Score Data

The following outputs are derived from the logical inputs above. The project defines their business intent, but not every final production formula, benchmark or threshold.

Derived Group	Examples	Source-Supported Use
Financial Strength	Revenue; Revenue Growth %; Gross Margin %; EBITDA Margin %; Operating Cash Flow; Cash Flow Margin %	Financial Strength scoring and business evaluation
Operational Performance	Revenue per Employee; Operating Cost %; Labor Cost %; Capacity Utilization %; On-Time Service %; Operational Efficiency Score	Operational Performance scoring
Growth	Customer Growth %; New Customer Acquisition; Recurring Revenue %; Average Revenue per Customer; 12-Month Revenue CAGR	Growth scoring
Customer Health	Customer Retention %; Customer Churn %; Repeat Customer Rate; Customer Complaint Rate; Customer Concentration %	Customer Health scoring
Risk	Revenue Volatility; Customer Concentration Risk; Margin Deterioration; Cash Flow Risk; Data Quality Score; Overall Business Risk Score	Risk scoring and alerts

5. Data Quality Requirements

Required inputs should be checked for missing values before KPI/scoring calculations are treated as decision-ready.

Validity rules must be approved for fields where invalid values can affect KPI calculations.

Duplicate-detection logic must be defined against the actual source structure before production use.

Staleness/freshness rules require an approved time threshold; the source does not establish one.

Data Quality Score/status must remain visible so users can distinguish weak business performance from weak evidence.

UAT UT-08 validates the data-quality warning behavior when required input is removed.

6. Data Lineage and Ownership

The source identifies stakeholder groups and logical domains, but it does not establish physical source systems or named data owners. Those details should be completed during source-to-target mapping and technical discovery.

Item	Current Documentation Status
Physical source system	TBD / not established by source
Physical table / file / API	TBD / not established by source
Physical column name	TBD / not established by source
Data owner / steward name	TBD / not established by source
Refresh frequency	TBD / not established by source
Field length / precision	TBD / not established by source
Nullability / mandatory rule	To be defined per approved data-quality requirements
Benchmark / scoring threshold	Requires stakeholder validation / approval

7. Power BI Usage

Page	Key Data Domains
Investment Overview	Business Master, Scoring, Risk/Data Quality
Investment Evaluation	Business Master, Financial, Operations, Customers, Scoring, Data Quality
Business Profile	Business Master, Financial, Operations, Customers, Time, Risk
Portfolio Monitoring	Business Master, Time, Scoring, target/history data where available
Risk & Alerts	Financial, Customers, Time, Risk/Data Quality

8. Validation Checklist

Confirm each required logical field can be sourced.

Confirm business definitions with the relevant stakeholder group.

Confirm calculation grain and time period for each KPI input.

Confirm currency and unit conventions.

Confirm customer-level data availability for concentration measures.

Confirm historical-period availability for CAGR, volatility and trend analysis.

Confirm approved data-quality, normalization and recommendation rules before operational use.
