

REFERME INVESTMENTS

KPI CATALOGUE - 28 KPIs

Investment Analytics & Decision-Support Framework
February - June 2026

Document Control	Details
Document ID	RMI-KPI-001
Version	1.0
Purpose	Define the 28 investment KPIs used by the ReferMe Investments analytical framework.
Framework	5 dimensions: Financial Strength, Operational Performance, Growth, Customer Health and Risk.
Important Note	The project source defines KPI business meaning/calculation intent, but does not provide final field-level formulas, benchmarks or thresholds for every KPI. Those items must be validated before operational use.

1. KPI Framework Overview

The ReferMe Investments framework contains 28 KPIs grouped into five analytical dimensions. The catalogue provides a consistent vocabulary for investment evaluation, scoring, drill-down, monitoring and risk analysis.

Dimension	KPI Count	Proposed Dimension Weight
Financial Strength	6	25%
Operational Performance	6	20%
Growth	5	20%
Customer Health	5	15%
Risk	6	20%
Total	28	100%

The dimension weights are proposed methodology in the project source and require stakeholder validation. They are not presented as final proprietary ReferMe rules.

2. Catalogue Conventions

- KPI IDs in this standalone catalogue are documentation identifiers added for navigation; the source defines KPI names but does not assign KPI IDs.
- “Business Meaning / Calculation Intent” preserves the wording and level of detail supported by the source project report.
- “Primary Data Domain” maps each KPI to the source-defined data domains and representative fields; it is a logical mapping, not a claim about production systems.
- Exact calculation grain, period logic, benchmark, normalization rule, target, alert threshold and score direction remain subject to validation where not defined by the source.

3. Master KPI Catalogue

KPI ID	Dimension	KPI	Business Meaning / Calculation Intent	Primary Data Domain
FS-01	Financial Strength	Revenue	Scale of business / top-line performance	Financial
FS-02	Financial Strength	Revenue Growth %	Change in revenue over comparison period	Financial + Time
FS-03	Financial Strength	Gross Margin %	Gross profit as % of revenue	Financial
FS-04	Financial Strength	EBITDA Margin %	EBITDA as % of revenue	Financial
FS-05	Financial Strength	Operating Cash Flow	Cash generated from operations	Financial
FS-06	Financial Strength	Cash Flow Margin %	Operating cash flow as % of revenue	Financial
OP-01	Operational Performance	Revenue per Employee	Revenue / employee count	Financial + Workforce & Operations
OP-02	Operational Performance	Operating Cost %	Operating costs as % of revenue	Financial + Workforce & Operations
OP-03	Operational Performance	Labor Cost %	Labor cost as % of revenue	Financial + Workforce & Operations
OP-04	Operational Performance	Capacity Utilization %	Used capacity / available capacity	Workforce & Operations
OP-05	Operational Performance	On-Time Service %	On-time services / total services	Workforce & Operations
OP-06	Operational Performance	Operational Efficiency Score	Composite operating-efficiency measure	Workforce & Operations / Scoring
GR-01	Growth	Customer Growth %	Change in active customer base	Customers + Time
GR-02	Growth	New Customer Acquisition	New customers acquired in period	Customers + Time
GR-03	Growth	Recurring Revenue %	Recurring revenue / total revenue	Financial + Customers
GR-04	Growth	Average Revenue per Customer	Revenue / active customers	Financial + Customers
GR-05	Growth	12-Month Revenue CAGR	Annualized revenue growth	Financial + Time
CH-01	Customer Health	Customer Retention %	Retained customers / eligible prior customers	Customers + Time
CH-02	Customer Health	Customer Churn %	Lost customers / eligible prior customers	Customers + Time
CH-03	Customer Health	Repeat Customer Rate	Repeat customers / total customers	Customers
CH-04	Customer Health	Customer Complaint Rate	Complaints / customer or service base	Customers
CH-05	Customer Health	Customer Concentration %	Revenue exposure to largest customer(s)	Customers + Financial

RK-01	Risk	Revenue Volatility	Variability of revenue over time	Financial + Time
RK-02	Risk	Customer Concentration Risk	Risk derived from customer dependency	Customers + Financial
RK-03	Risk	Margin Deterioration	Negative movement in margin	Financial + Time
RK-04	Risk	Cash Flow Risk	Risk arising from weak/unstable operating cash flow	Financial + Time
RK-05	Risk	Data Quality Score	Completeness/validity/consistency of required data	Data Quality
RK-06	Risk	Overall Business Risk Score	Composite business-risk measure	Risk / Scoring

4. Data Requirements Supporting the KPIs

Data Domain	Representative Fields	KPI Use
Business Master	Business ID, type, evaluation status	Target identification and filtering
Financial	Revenue, gross profit, EBITDA, operating cash flow, costs	Financial Strength / Risk
Workforce & Operations	Employees, labor cost, capacity, on-time service	Operational Performance
Customers	Customer count, new/lost/repeat customers, complaints, customer revenue	Growth / Customer Health / concentration
Time	Month/quarter/year	Trends, CAGR, volatility, actual vs target
Scoring	KPI score, dimension score, investment score, recommendation	Decision support
Data Quality	Missing, invalid, duplicate or stale input indicators	Data Quality Score / confidence

5. KPI Use in the Decision Process

Stage	Use of KPI Framework
Investment Evaluation	Calculate applicable KPIs from validated business inputs.
Normalization	Convert KPI performance into comparable scoring values using approved methodology.
Dimension Scoring	Aggregate KPI performance into the five dimension scores.
Investment Scoring	Use validated dimension weights to produce the overall 0-100 Investment Score.
Explainability	Allow users to inspect underlying KPI evidence behind dimension and overall scores.
Monitoring	Use historical KPI values for trends and actual-vs-target analysis where sufficient data exists.
Risk & Alerts	Use approved threshold logic to surface deterioration/concentration indicators where supporting data exists.

6. KPI Governance and Validation Rules

- Do not use final Invest / Review / Reject labels until recommendation thresholds are approved.
- Do not present the proposed dimension weights as final until stakeholder validation is complete.
- Do not calculate historical trends, CAGR or volatility unless sufficient time-series data exists.
- Data-quality limitations must remain visible so weak evidence is not mistaken for weak or strong business performance.
- Composite scores must be supported by dimension/KPI drill-down because a single score can hide a critical weakness.
- Changes to KPI definitions, scoring logic, thresholds or data mapping should be assessed through change control and reflected in the RTM/UAT coverage.

7. KPI-to-Power BI Usage

Power BI Page	KPI Role
1. Investment Overview	Summarized investment score and selected dimension-level indicators across evaluated businesses.
2. Investment Evaluation	Overall score, five dimension scores and underlying KPI values for the selected business.
3. Business Profile	Revenue, customer, profitability, operations, growth and risk measures for the selected business.
4. Portfolio Monitoring	Actual-vs-target, KPI trends and score/risk changes where historical/target data exists.
5. Risk & Alerts	Revenue decline, churn, margin deterioration, concentration and cash-flow risk signals where required data exists.

8. Open Items Requiring Business / Technical Validation

- Exact source-field mapping for each KPI.
- Final calculation grain and comparison period for period-based KPIs.
- Final benchmark and normalization methodology, including any segment-aware benchmarks.
- Final scoring direction and KPI-level scoring rules.
- Final dimension weights.
- Final recommendation and alert thresholds.
- Definition and weighting logic for composite KPIs such as Operational Efficiency Score and Overall Business Risk Score.
- Production refresh ownership and data-quality remediation process.
