

. Source-to-Target Mapping (STTM)

The project source defines the required data domains and KPI framework but does not provide physical database/table names. Therefore Source Object names below are logical placeholders for the BA design and should be replaced with actual system names during implementation.

Source Domain / Logical Field	Transformation / Business Logic	Target KPI / Model Field	Power BI Use	Validation
Business Master.BusinessID	Trim; mandatory; unique business identifier	DimBusiness[BusinessID]	Slicer, drill-through, relationships	Not null; unique in dimension
Business Master.BusinessType	Standardize business-type labels	DimBusiness[BusinessType]	Portfolio segmentation	Allowed standardized values
Financial.Revenue	Aggregate by BusinessID + period	[Revenue]	Cards, trends, Revenue Growth	Numeric; >=0; reconcile to source
Financial.COGS	Revenue - COGS	[Gross Profit] -> [Gross Margin %]	Financial Strength	Numeric; period aligned
Financial.EBITDA	Aggregate by period; EBITDA / Revenue	[EBITDA], [EBITDA Margin %]	Cards, trends, scoring	Numeric; denominator check
Financial.OperatingCashFlow	Aggregate; OCF / Revenue	[Operating Cash Flow], [Cash Flow Margin %]	Financial Strength / Risk	Numeric; period aligned
Operations.EmployeeCount	Revenue / average employee count	[Revenue per Employee]	Operational Performance	Positive headcount
Operations.OperatingCost	Operating Cost / Revenue	[Operating Cost %]	Operational Performance	Numeric; denominator check
Operations.LaborCost	Labor Cost / Revenue	[Labor Cost %]	Operational Performance	Numeric; denominator check
Operations.CapacityUsed + CapacityAvailable	Used / available capacity	[Capacity Utilization %]	Operational Performance	Available > 0
Operations.OnTimeServices + TotalServices	On-time / total services	[On-Time Service %]	Operational Performance	Total > 0
Customers.ActiveCustomers	Compare current vs prior approved period	[Customer Growth %]	Growth	Period alignment
Customers.NewCustomers	Sum per evaluation period	[New Customer Acquisition]	Growth	Non-negative
Financial.RecurringRevenue	Recurring Revenue / Revenue	[Recurring Revenue %]	Growth / financial evidence	0-100%

Customers.ActiveCustomers + Revenue	Revenue / active customers	[Average Revenue per Customer]	Growth	Customers > 0
Financial.Revenue + Date	Approved 12-month growth methodology	[12-Month Revenue CAGR]	Growth	Requires sufficient history
Customers.Retained / Eligible	Retained / eligible prior customers	[Customer Retention %]	Customer Health	0-100%
Customers.Lost / Eligible	Lost / eligible prior customers	[Customer Churn %]	Customer Health / Alerts	0-100%
Customers.RepeatCustomers	Repeat / total customers	[Repeat Customer Rate]	Customer Health	0-100%
Customers.Complaints + base	Complaints / approved customer or service base	[Customer Complaint Rate]	Customer Health	Base > 0
Customers.TopCustomerRevenue	Top customer(s) revenue / Revenue	[Customer Concentration %]	Customer Health / Risk	0-100%; definition approved
Financial.Revenue + Date	Calculate variability over approved lookback	[Revenue Volatility]	Risk	Requires history
Customer Concentration %	Normalize against approved risk bands	[Customer Concentration Risk]	Risk / Alerts	Threshold approved
EBITDA Margin + Date	Current margin - prior comparison margin	[Margin Deterioration]	Risk / Alerts	Period aligned
Operating Cash Flow history	Normalize cash-flow weakness/instability	[Cash Flow Risk]	Risk / Alerts	Methodology approved
Data validation results	Composite completeness/validity/consistency result	[Data Quality Score]	Risk / confidence	Rules approved
Risk components	Approved weighted/normalized risk methodology	[Overall Business Risk Score]	Risk & Alerts	Weights approved
Five dimension scores	Weighted sum using approved dimension weights	[Investment Score]	Evaluation / Overview	Weights total 100%
Investment Score + risk rules	Apply approved decision thresholds and overrides	[Recommendation]	Invest / Review / Reject	Thresholds approved

Data Quality Rule Catalogue

Rule ID	Rule	Failure Treatment
DQ-01	Business ID must be present and valid.	Reject record / return for correction.
DQ-02	Evaluation period must be present and valid.	Reject period-based KPI calculation.
DQ-03	Revenue denominators used in margin calculations must be non-zero.	Return KPI as not calculable; flag data issue.
DQ-04	Percentage KPIs must fall within logically valid bounds unless business definition permits otherwise.	Flag exception for analyst review.
DQ-05	Duplicate BusinessID + evaluation-period records must be resolved before scoring.	Block duplicate contribution to score.
DQ-06	Mandatory financial, operational and customer inputs must meet approved completeness threshold.	Lower confidence / Data Quality Score.
DQ-07	KPI source period must align with the evaluation period.	Flag stale or mismatched evidence.
DQ-08	Scoring weights must total 100% before Investment Score calculation.	Block scoring configuration.
