

UAT Execution Results

The source project contains UAT scenarios and expected results, but it does not contain actual execution evidence. The table below is therefore an illustrative portfolio artifact showing how execution would be documented. Do not present the Pass/Fail statuses as actual ReferMe test evidence unless you personally executed and retained evidence.

Test ID	Scenario	Expected Result	Illustrative Status	Evidence to Retain
UT-01	KPI calculation	All applicable KPIs calculate with no unexpected blanks	PASS (illustrative)	Input extract + KPI reconciliation screenshot
UT-02	Dimension scoring	Dimension score equals weighted KPI result	PASS (illustrative)	Manual calculation vs Power BI output
UT-03	Investment scoring	Overall score equals approved weighted calculation	PASS (illustrative)	Score reconciliation workbook
UT-04	Recommendation	Correct Invest/Review/Reject at approved thresholds	PASS after retest (illustrative)	Boundary-value screenshots
UT-05	Drill-down	Underlying KPI values reconcile to selected business summary	PASS (illustrative)	Drill-through screenshot + source values
UT-06	Portfolio trend	Actual vs target and score/risk changes display correctly	PASS (illustrative)	Trend screenshot + source periods
UT-07	Risk alert	Approved threshold breach produces relevant warning	PASS after retest (illustrative)	Alert screenshot + threshold config
UT-08	Business profile	Selected target filters all relevant visuals correctly	PASS (illustrative)	Filter-state screenshot
UT-09	Data quality	Invalid/missing inputs reduce quality status and show limitation	PASS after retest (illustrative)	Invalid test record + warning screenshot

Illustrative Defect Log

These are deliberately realistic sample defects tied to the documented requirements. They are not claimed as defects that actually occurred at ReferMe.

Defect ID	Related Test	Severity	Illustrative Defect	Root Cause / Fix	Status
DEF-001	UT-04	High	Score exactly at the Invest threshold displayed Review instead of Invest.	Boundary operator implemented as > instead of >=; corrected decision rule and retested threshold boundaries.	Closed - illustrative

DEF-002	UT-07	High	Customer concentration breach did not appear in Risk & Alerts after refresh.	Alert measure referenced wrong threshold parameter; corrected mapping and validated affected business.	Closed - illustrative
DEF-003	UT-09	Medium	Missing operating cash-flow input produced blank KPI but no visible data-quality warning.	Data-quality rule was not included in composite status; added mandatory-field check and warning.	Closed - illustrative
DEF-004	UT-05	Medium	Business drill-through retained a previous business filter and showed mixed KPI context.	Conflicting page-level filter; removed conflict and enforced single-business context.	Closed - illustrative
DEF-005	UT-06	Low	Actual-vs-target chart sorted month labels alphabetically rather than chronologically.	Month name used without Month Number sort column; corrected sort-by column.	Closed - illustrative

UAT Sign-off Template

Sign-off Field	Value
UAT Scope	BRD/FRS requirements mapped through RTM to dashboard and scoring outputs
Entry Criteria	Stable test build; approved test data; approved scoring/threshold configuration; critical unit/system defects resolved
Exit Criteria	All critical/high UAT defects closed; medium defects accepted or planned; key calculations reconciled; business owner approval
