

THE GLAMSQUAD SALON

User Stories & Acceptance Criteria

Profitability & Operational Analytics | Portfolio Requirements

Document Control	Details
Client	The GlamSquad Salon
Role	Business Analyst + Data Analyst
Primary User	Salon manager
Project Period	May–Aug 2025
Purpose	Translate confirmed business needs into testable analytical/reporting requirements.
Status	Portfolio reconstruction based on confirmed engagement facts
Evidence note: These user stories reconstruct the engagement requirements for portfolio/interview use. They are not claimed to be verbatim historical Jira tickets or formally signed user stories.	

1. User Story Framework

Each story uses the standard structure: As a [user], I want [capability], so that [business value]. Acceptance criteria define observable conditions that can be validated against the sanitized/rebuilt solution.

2. Primary Persona

Persona	Need
Salon Manager	Understand the drivers of profitability and use reliable analysis to make pricing, staffing, scheduling, service, customer and cost decisions.

3. Story Summary

ID	Story	Business Need	BR Trace
US-01	Profitability Visibility	View revenue, expenses and profit trends and understand the major drivers of declining profitability.	BR-01, BR-02, BR-18
US-02	Appointment Utilization & No-Shows	Understand appointment utilization, demand patterns, cancellations and no-shows.	BR-03, BR-04
US-03	Customer Repeat & Retention Analysis	Identify repeat customers and understand repeat-visit/retention behaviour.	BR-05, BR-06
US-04	Service, Pricing & Discount Analysis	Compare service performance, pricing, discounts and service economics.	BR-07, BR-08, BR-09
US-05	Staff Performance & Scheduling	Compare stylist performance and align staffing/scheduling with demand.	BR-10, BR-11, BR-12, BR-13
US-06	Customer Feedback Analysis	Review recurring customer-feedback themes alongside operational findings.	BR-15
US-07	Management Dashboard & Recommendations	Use a consolidated Power BI dashboard and actionable recommendations to support decisions.	BR-16, BR-17
US-08	Reliable & Confidential Analysis	Trust the calculations while protecting confidential customer and commercial information.	Cross-cutting

4. Detailed User Stories

US-01 — Profitability Visibility

User story: As the salon manager, I want to view profitability and its underlying revenue, cost and operational drivers so that I can understand why profit is declining and decide where corrective action is required.

AC ID	Acceptance Criterion
AC-01.1	The solution displays validated revenue and expense information for the selected reporting context.
AC-01.2	Profit is calculated consistently as Revenue – Expenses at the agreed reporting level.
AC-01.3	The analysis allows profitability to be examined alongside relevant drivers such as services, pricing/discounts, staffing/commissions, costs, appointments and customer behaviour.
AC-01.4	Before-and-after profit can be compared for outcome monitoring without exposing confidential ₹ values in the public portfolio.
AC-01.5	The public case study does not attribute the 15% improvement to a single isolated recommendation when multiple changes were implemented.

Implementation / evidence note: The confirmed outcome was a 15% profit increase within approximately two months following implementation of necessary recommendations.

US-02 — Appointment Utilization, Demand & No-Shows

User story: As the salon manager, I want to understand appointment utilization, demand patterns, cancellations and no-shows so that staffing capacity and lost appointment opportunities can be managed more effectively.

AC ID	Acceptance Criterion
AC-02.1	Valid appointment records can be analyzed by available date/time dimensions.
AC-02.2	Cancellation and no-show records are identifiable using validated source statuses.
AC-02.3	The solution supports comparison of appointment activity across periods to identify comparatively higher and lower demand.
AC-02.4	Demand analysis can be used alongside staffing information to assess scheduling alignment.
AC-02.5	Cancellations/no-shows are visible as a meaningful operational issue rather than being silently excluded.

Implementation / evidence note: Peak demand was generally associated with evenings and periods around major festivals. Exact historical peak days/hours are not retained and must not be invented.

US-03 — Customer Repeat & Retention Analysis

User story: As the salon manager, I want to identify repeat customers and understand repeat-visit and retention behaviour so that I can improve customer continuity and target repeat-customer initiatives.

AC ID	Acceptance Criterion
AC-03.1	Repeat visits can be linked using available customer information; phone-number data is used for repeat matching where appropriate.
AC-03.2	Public outputs do not display customer phone numbers or other personally identifiable information.
AC-03.3	The solution can distinguish one-time and repeat visit behaviour using the validated matching logic.
AC-03.4	Repeat-customer and retention measures use documented denominators/business rules.
AC-03.5	Customer behaviour can be analyzed with relevant appointment/service context where supported by the rebuilt model.

US-04 — Service, Pricing & Discount Analysis

User story: As the salon manager, I want to compare service performance, pricing, discounts and service economics so that I can identify commercial changes that may improve profitability.

AC ID	Acceptance Criterion
AC-04.1	Service activity and revenue can be compared across validated service categories.
AC-04.2	Pricing and discount information can be analyzed without inventing unsupported historical discount thresholds.
AC-04.3	The analysis can investigate whether some services appear underpriced where the available data supports that conclusion.
AC-04.4	Premium-service economics can be compared where sufficient revenue and direct-cost information is available.
AC-04.5	Service contribution/margin is calculated only where associated direct costs can be reliably attributed.
AC-04.6	Recommendations distinguish evidence-supported observations from assumptions.

US-05 — Staff Performance, Utilization & Scheduling

User story: As the salon manager, I want to compare stylist performance and staffing utilization against customer demand so that I can improve scheduling, capacity and staffing-cost decisions.

AC ID	Acceptance Criterion
AC-05.1	Stylist performance can be compared using relevant validated indicators such as appointments, revenue, working hours/utilization, repeat customers and feedback where available.
AC-05.2	The analysis can identify comparatively underutilized staff/periods.
AC-05.3	The analysis can identify periods where available staffing is insufficient relative to demand.
AC-05.4	Salary and commission costs can be considered alongside staff activity/performance for profitability analysis.
AC-05.5	Scheduling analysis supports comparison of staffing availability with appointment demand.
AC-05.6	No unsupported weighted 'staff score' or arbitrary utilization threshold is introduced as a historical client rule.
Implementation / evidence note: Confirmed engagement findings included peak-period understaffing, off-peak staff underutilization, major differences in stylist revenue, high salary/commission costs and scheduling problems.	

US-06 — Customer Feedback Analysis

User story: As the salon manager, I want recurring customer-feedback themes summarized alongside quantitative analysis so that operational issues can be understood from both data and customer-experience perspectives.

AC ID	Acceptance Criterion
AC-06.1	Available feedback can be reviewed from confirmed sources such as Google reviews, Instagram comments, WhatsApp feedback, surveys, salon records and direct conversations.
AC-06.2	Recurring themes can be categorized consistently.
AC-06.3	Confirmed themes include pricing, staff behaviour, cleanliness and staff availability.
AC-06.4	Qualitative feedback remains distinguishable from financial and transactional data.
AC-06.5	Recommendations based on feedback are supported by identifiable recurring themes rather than fabricated sentiment percentages.

US-07 — Management Dashboard & Actionable Recommendations

User story: As the salon manager, I want a consolidated Power BI dashboard and clear recommendations so that I can understand the analysis quickly and take practical business action.

AC ID	Acceptance Criterion
AC-07.1	The Power BI solution is built from the prepared analytical data and supports management-level review.
AC-07.2	The dashboard provides visibility across profitability, services/pricing, staff/utilization and customer/appointment analysis.
AC-07.3	Filters and visuals do not produce contradictory KPI definitions across pages.
AC-07.4	Major dashboard KPIs reconcile with the prepared analytical data.
AC-07.5	Findings are translated into actionable recommendations across relevant areas including pricing, staffing, scheduling, promotions, discount control, service mix, repeat customers and cost reduction.
AC-07.6	The solution can be explained to management through a live walkthrough.

Implementation / evidence note: The four logical dashboard views documented in the portfolio are recommended reconstruction labels, not claims about exact historical page names/layout.

US-08 — Reliable & Confidential Analysis

User story: As the salon manager, I want the analysis to be reliable and confidential so that decisions are based on trustworthy calculations without exposing sensitive business or customer information.

AC ID	Acceptance Criterion
AC-08.1	Source data is cleaned and validated before KPI calculation.
AC-08.2	Duplicate/inconsistent customer records are checked before repeat-customer analysis.
AC-08.3	Dates, service names, stylist names and status values are standardized where required.
AC-08.4	Revenue, expenses, discounts, costs and compensation fields are validated before profitability calculations.
AC-08.5	Public portfolio outputs exclude customer-level PII and confidential commercial values.
AC-08.6	Unknown historical values, thresholds, SQL/DAX logic or dashboard details are not fabricated.
AC-08.7	Any sanitized/reconstructed implementation logic is clearly distinguishable from confirmed historical facts.

5. Definition of Ready (Portfolio)

A story is ready for implementation/testing when the following are sufficiently understood:

- Business question and intended decision are clear.
- Required data domains are available or the limitation is documented.
- Relevant KPI/business definition is documented.
- Customer PII and confidential commercial handling is understood.
- Known unknowns are explicitly recorded rather than silently assumed.
- Acceptance criteria are testable against the rebuilt/sanitized solution.

6. Definition of Done (Portfolio)

- Required data is cleaned and validated for the story.
- Calculation logic is implemented using documented business definitions.
- Relevant Power BI visual/reporting output is created where applicable.
- Results reconcile with prepared analysis/source checks.
- Filters/interactions have been tested where applicable.
- Confidential data is excluded from public portfolio outputs.
- Finding/recommendation wording does not exceed what the evidence supports.
- Story acceptance criteria are demonstrably satisfied in the rebuilt portfolio solution.

7. Requirements Traceability

Story	BRs	Primary Analytical Output
US-01	BR-01, BR-02, BR-18	Profitability analysis / executive reporting
US-02	BR-03, BR-04, BR-12	Appointment utilization, demand and no-show analysis
US-03	BR-05, BR-06	Repeat-customer / retention analysis
US-04	BR-07, BR-08, BR-09	Service, pricing, discount and economics analysis
US-05	BR-10, BR-11, BR-12, BR-13	Staff performance/utilization and scheduling analysis
US-06	BR-15	Customer feedback theme analysis
US-07	BR-16, BR-17	Power BI dashboard and recommendations
US-08	Cross-cutting	Validation, confidentiality and evidence controls

8. Confirmed vs Reconstructed

Category	Treatment
Confirmed	Business problem, client/stakeholder, data types/sources, analytical areas, staffing/operational findings, tools, dashboard built from scratch, live walkthrough, recommendations and 15% outcome.
Reconstructed for portfolio	Story IDs, acceptance-criteria IDs, formal DoR/DoD wording, logical dashboard view labels and traceability structure.
Not claimed	Historical Jira tickets, sprint records, formal story approvals, exact thresholds/financial values, exact peak hours/days, exact historical SQL/DAX or dashboard layout.
