

THE GLAMSQUAD SALON

KPI Catalogue

Profitability, Customer, Appointment, Service & Workforce Analytics

Document Control	Details
Project	The GlamSquad Salon Profitability & Operational Analytics
Role	Business Analyst + Data Analyst
Project Period	May–Aug 2025
Purpose	Define the business meaning and portfolio calculation intent for the KPIs used to diagnose profitability and operational performance.
Status	Portfolio reconstruction based on confirmed engagement facts
Important: Exact historical KPI thresholds, denominators, source-column names and client values are not retained. Formulas below document the intended portfolio logic and must be validated against the sanitized/rebuilt dataset.	

1. KPI Design Principles

- Every KPI must answer a business question and support a management decision.
- Member/customer-level counts should use a validated unique customer key; phone-number data was used for repeat-visit matching in the engagement.
- Profitability KPIs require validated revenue and expense/cost inputs.
- Cancellation/no-show calculations require standardized appointment-status values.
- Staff performance should be interpreted using multiple indicators rather than one arbitrary score.
- Qualitative customer feedback should support interpretation but must remain separate from transactional financial measures.
- Public portfolio outputs must not expose customer PII or confidential commercial values.

2. KPI Summary

ID	KPI	Category
KPI-01	Total Revenue	Profitability
KPI-02	Total Expenses	Profitability
KPI-03	Profit	Profitability
KPI-04	Profit Margin %	Profitability
KPI-05	Profit Improvement %	Profitability / Outcome
KPI-06	Total Appointments	Appointments
KPI-07	Completed Appointments	Appointments
KPI-08	Appointment Utilization %	Appointments / Capacity
KPI-09	Cancellation Rate %	Appointments
KPI-10	No-Show Rate %	Appointments
KPI-11	Unique Customers	Customer
KPI-12	Repeat Customers	Customer
KPI-13	Repeat Customer Rate %	Customer
KPI-14	Customer Retention Rate %	Customer
KPI-15	Revenue by Service	Service
KPI-16	Service Mix %	Service
KPI-17	Average Revenue per Completed Appointment	Service / Commercial
KPI-18	Discount Amount / Discount Rate %	Pricing
KPI-19	Service Contribution / Margin	Pricing / Service
KPI-20	Revenue by Stylist	Staff
KPI-21	Appointments by Stylist	Staff
KPI-22	Revenue per Working Hour	Staff
KPI-23	Staff Utilization %	Staff
KPI-24	Commission Cost	Staff / Cost
KPI-25	Commission to Revenue %	Staff / Cost
KPI-26	Material Cost %	Cost
KPI-27	Peak-Demand Period	Operations
KPI-28	Feedback Theme Frequency	Customer Feedback

3. Profitability KPIs

ID	KPI	Definition	Portfolio Formula	Decision Use	Data
KPI-01	Total Revenue	Total validated business revenue in the selected reporting context.	$SUM(\text{Revenue Amount})$	Overall commercial performance.	Revenue
KPI-02	Total Expenses	Total validated expenses in the selected reporting context.	$SUM(\text{Expense Amount})$	Cost base and profitability.	Expenses
KPI-03	Profit	Revenue remaining after expenses.	$\text{Total Revenue} - \text{Total Expenses}$	Core measure for diagnosing declining profitability.	Revenue + Expenses
KPI-04	Profit Margin %	Profit expressed relative to revenue.	$\text{Profit} \div \text{Total Revenue} \times 100$	Shows profitability independent of revenue scale.	Revenue + Expenses
KPI-05	Profit Improvement %	Percentage change in profit after implementation relative to the pre-implementation baseline.	$(\text{Profit After} - \text{Profit Before}) \div \text{Profit Before} \times 100$	Measures the confirmed business outcome.	Before/after profit outcome.
Confirmed outcome: The engagement recorded a 15% profit increase within approximately two months after necessary recommendations were implemented. The underlying ₹ values remain confidential.					

4. Appointment & Utilization KPIs

ID	KPI	Definition	Portfolio Formula	Decision Use
KPI-06	Total Appointments	Count of valid appointment records in the selected period.	$COUNT(\text{valid appointment records})$	Understand demand/activity volume.
KPI-07	Completed Appointments	Appointments with a validated completed/attended status.	$COUNT(\text{appointments where status = completed/attended})$	Understand delivered service activity.
KPI-08	Appointment Utilization %	Completed/used appointment capacity relative to available bookable capacity.	$\text{Used/Completed Slots} \div \text{Available Bookable Slots} \times 100$	Assess capacity use. Only calculate if reliable capacity/slot data exists.
KPI-09	Cancellation Rate %	Cancelled appointments as a percentage of the agreed appointment denominator.	$\text{Cancelled Appointments} \div \text{Eligible/Booked Appointments} \times 100$	Quantify appointment loss from cancellations.
KPI-10	No-Show Rate %	No-show appointments as a percentage of the agreed appointment denominator.	$\text{No-Show Appointments} \div \text{Eligible/Booked Appointments} \times 100$	Quantify lost appointment opportunity from no-shows.
Denominator control: For cancellation and no-show rates, the exact historical denominator rule is not retained. The final rebuilt KPI must document whether the denominator is all booked appointments or another validated eligible set.				

5. Customer KPIs

ID	KPI	Definition	Portfolio Formula	Decision Use
KPI-11	Unique Customers	Distinct customers in the selected reporting context.	DISTINCTCOUNT(valid customer key)	Understand customer base/activity.
KPI-12	Repeat Customers	Customers with more than one validated visit/appointment under the repeat-matching rule.	COUNT(customers with visit count > 1)	Identify repeat business.
KPI-13	Repeat Customer Rate %	Repeat customers as a share of the agreed customer base.	Repeat Customers ÷ Unique/Eligible Customers × 100	Monitor repeat behaviour.
KPI-14	Customer Retention Rate %	Percentage of eligible customers who return/continue under the agreed retention window.	Retained Customers ÷ Eligible Customers × 100	Evaluate customer continuity over time.
Customer matching: Phone-number data was used to identify repeat visits. Public portfolio outputs must never display customer phone numbers.				
Retention rule: The exact historical retention time window/eligibility rule is not retained. It must be defined explicitly in the sanitized rebuild rather than invented as historical logic.				

6. Service & Pricing KPIs

ID	KPI	Definition	Portfolio Formula	Decision Use
KPI-15	Revenue by Service	Validated revenue attributable to each service.	SUM(Revenue Amount) grouped by Service	Identify commercially important services.
KPI-16	Service Mix %	Share of completed service activity represented by each service.	Service Count ÷ Total Completed Services × 100	Understand demand/service composition.
KPI-17	Avg Revenue per Completed Appointment	Average revenue generated for a completed appointment.	Total Revenue ÷ Completed Appointments	Compare commercial yield across periods/segments.
KPI-18	Discount Amount / Rate %	Value of discounts and, where valid, discount relative to pre-discount value.	Discount Amount; Discount Amount ÷ Pre-Discount Value × 100	Assess whether discounting is eroding commercial performance.
KPI-19	Service Contribution / Margin	Service revenue remaining after reliably attributable direct service costs.	Service Revenue – Direct Service Costs; Margin % = Contribution ÷ Service Revenue × 100	Assess underpricing/premium-service economics where cost attribution is reliable.
Pricing evidence: The engagement investigated potential underpricing, excessive discounting and stronger economics of premium services. No unsupported service price, margin or discount percentage is published.				

7. Staff / Stylist KPIs

ID	KPI	Definition	Portfolio Formula	Decision Use
KPI-20	Revenue by Stylist	Revenue attributable to services delivered by each stylist.	SUM(Revenue Amount) grouped by Stylist	Compare commercial contribution across stylists.
KPI-21	Appointments by Stylist	Valid appointments/services handled by each stylist.	COUNT(valid completed appointments) grouped by Stylist	Compare workload/activity.
KPI-22	Revenue per Working Hour	Revenue attributed to a stylist relative to validated working hours.	Stylist Revenue ÷ Working Hours	Compare commercial productivity with time input.
KPI-23	Staff Utilization %	Used service/appointment time relative to available working capacity.	Used/Booked Service Time ÷ Available Working Time × 100	Identify underutilization and capacity pressure where duration/capacity data supports calculation.
KPI-24	Commission Cost	Total validated commission cost for the selected context.	SUM(Commission Amount)	Understand staff-linked cost.
KPI-25	Commission to Revenue %	Commission cost relative to attributed revenue.	Commission Cost ÷ Revenue × 100	Assess compensation cost alongside commercial output.

Interpretation rule: Do not rank stylists using revenue alone. The engagement considered multiple factors such as appointments, revenue, working hours/utilization, repeat customers and feedback where available.

Confirmed finding: The analysis identified major differences in revenue per stylist, staff underutilization in some periods, insufficient staffing during peak demand, high salary/commission costs and scheduling problems.

8. Cost KPI

ID	KPI	Definition	Portfolio Formula	Decision Use
KPI-26	Material Cost %	Product/material cost relative to relevant service revenue where costs can be validly attributed.	Material/Product Cost ÷ Relevant Service Revenue × 100	Understand whether direct service costs are reducing service economics.

9. Demand & Feedback KPIs

ID	KPI	Definition	Portfolio Logic	Decision Use
KPI-27	Peak-Demand Period	Time/day period with comparatively high validated appointment activity.	Compare appointment counts/utilization by available time and day dimensions; identify highest-demand periods.	Align staffing and scheduling with demand.
KPI-28	Feedback Theme Frequency	Count of qualitative feedback items categorized into a recurring theme.	COUNT(feedback items) grouped by validated theme/category.	Identify recurring customer-experience issues and compare them with quantitative findings.
Peak-period evidence: The remembered pattern was generally evenings and periods around major festivals. Exact historical peak hours/days and percentages are not retained.				
Feedback themes: Confirmed themes included pricing, staff behaviour, cleanliness and staff availability. Do not invent sentiment scores or percentages unless calculated from a sanitized feedback dataset.				

10. KPI-to-Business-Problem Traceability

Business Question	KPIs
Is declining profitability driven by revenue, cost or both?	KPI-01 to KPI-05, KPI-18, KPI-19, KPI-24 to KPI-26
Are appointments/capacity being used effectively?	KPI-06 to KPI-10, KPI-27
Are customers returning?	KPI-11 to KPI-14
Which services/pricing decisions affect performance?	KPI-15 to KPI-19
Is staffing aligned with demand and commercial output?	KPI-20 to KPI-25, KPI-27
What customer-experience issues support the diagnosis?	KPI-28

11. Recommended Dashboard Placement

Logical Dashboard View	Primary KPIs
Executive Profitability Overview	KPI-01 to KPI-05; selected trend/driver views
Service & Pricing Analysis	KPI-15 to KPI-19; KPI-26
Staff Performance & Utilization	KPI-20 to KPI-25; KPI-27
Customer & Appointment Analysis	KPI-06 to KPI-14; KPI-27; selected feedback themes

12. KPI Validation Rules

- Reconcile revenue and expense totals with the cleaned analytical source before publishing profit.
- Confirm appointment-status mapping before calculating completed, cancelled or no-show measures.
- Deduplicate/standardize customer identifiers before unique/repeat-customer calculations.
- Do not expose phone numbers in reporting outputs.
- Validate service and stylist mappings before grouped revenue/performance measures.
- Calculate utilization only when a defensible capacity denominator is available.
- Calculate service margin only when direct costs can be reliably attributed.
- Check divide-by-zero and blank-denominator behaviour for all percentage KPIs.
- Ensure report filters produce consistent KPI definitions across pages.
- Keep qualitative feedback counts/themes separate from transactional KPI totals.

13. Confirmed vs Reconstructed KPI Logic

Category	Treatment
Confirmed analytical areas	Profitability, appointments/utilization, service mix, repeat customers/retention, peak demand, staff performance, revenue by service/stylist, cancellations/no-shows, pricing/discounts, costs and feedback.
Confirmed outcome	15% profit increase within approximately two months after necessary recommendations were implemented.
Portfolio calculation intent	The formulas in this catalogue define how the KPIs should be rebuilt and tested; they are not claimed as verbatim historical Excel/SQL/DAX formulas.
Not retained	Exact historical denominators, thresholds, row counts, customer/staff counts, financial values, service margins, discount percentages and peak-hour/day values.
